CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the areas of Computer Science & Applications; Commerce; Business; Finance; Marketing; Human Resource Management; General Management; Banking; Economics; Tourism Administration & Management; Education; Law; Library & Information Science; Defence & Strategic Studies; Electronic Science; Corporate Governance; Industrial Relations; and emerging paradigms in allied subjects like Accounting; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Rural Economics; Co-operation; Demography; Development Planning; Development Studies; Applied Economics; Development Economics; Business Economics; Monetary Policy; Public Policy Economics; Real Estate; Regional Economics; Political Science; Continuing Education; Labour Welfare; Philosophy; Psychology; Sociology; Tax Accounting; Advertising & Promotion Management; Management Information Systems (MIS); Business Law; Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labour Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; International Relations; Human Rights & Duties; Public Administration; Population Studies; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism & Hospitality; Transportation Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic; Web Design and emerging paradigms in allied subjects.

Anybody can submit the **soft copy** of unpublished novel; original; empirical and high quality **research work/manuscript anytime** in **M.S. Word format** after preparing the same as per our **GUIDELINES FOR SUBMISSION**; at our email address i.e. infoijrcm@gmail.com or online by clicking the link **online submission** as given on our website ([FOR ONLINE SUBMISSION, CLICK HERE](#)).

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR
IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF _____.

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Education/Engineering/Mathematics/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript entitled ' _____ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the authors have seen and agreed to the submitted version of the manuscript and their inclusion of names as co-authors.

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

NAME OF CORRESPONDING AUTHOR

Designation :
Institution/College/University with full address & Pin Code :
Residential address with Pin Code :
Mobile Number (s) with country ISD code :
WhatsApp or Viber is active on your above noted Mobile Number (Yes/No) :
Landline Number (s) with country ISD code :
E-mail Address :
Alternate E-mail Address :
Nationality :

NOTES:

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:
New Manuscript for Review in the area of (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.
- g) The author (s) name or details should not appear anywhere on the body of the manuscript, except the covering letter and cover page of the manuscript, in the manner as mentioned in the guidelines.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers**, and **email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ACKNOWLEDGMENTS:** Acknowledgements can be given to reviewers, funding institutions, etc., if any.

5. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.
6. **JEL CODE:** Provide the appropriate Journal of Economic Literature Classification System code (s). JEL codes are available at www.aeaweb.org/econlit/jelCodes.php
7. **KEYWORDS:** JEL Code must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
8. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. **It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.**
9. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
10. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
11. **MAIN TEXT:** The main text should follow the following sequence:
 - INTRODUCTION**
 - REVIEW OF LITERATURE**
 - NEED/IMPORTANCE OF THE STUDY**
 - STATEMENT OF THE PROBLEM**
 - OBJECTIVES**
 - HYPOTHESES**
 - RESEARCH METHODOLOGY**
 - RESULTS & DISCUSSION**
 - FINDINGS**
 - RECOMMENDATIONS/SUGGESTIONS**
 - CONCLUSIONS**
 - LIMITATIONS**
 - SCOPE FOR FURTHER RESEARCH**
 - REFERENCES**
 - APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed 5000 WORDS.
12. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
13. **EQUATIONS/FORMULAE:** These should be consecutively numbered in parentheses, horizontally centered with equation/formulae number placed at the right. The equation editor provided with standard versions of Microsoft Word should be utilized. If any other equation editor is utilized, author must confirm that these equations may be viewed and edited in versions of Microsoft Office that do not have the editor.
14. **ACRONYMS:** These should not be used in the abstract. The use of acronyms is elsewhere is acceptable. Acronyms should be defined on first use in each section: Reserve Bank of India (RBI). Acronyms should be redefined on first use in subsequent sections.
15. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. Also check to make sure that everything that you are including in the reference section is cited in the paper. The author (s) are supposed to follow the references as per the following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use (ed.) for one editor, and (ed.s) for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - Headers, footers, endnotes and footnotes may not be used in the document, but in short succinct notes making a specific point, may be placed in number orders following the references.

ENERGY SAVING ROUTING PROTOCOL WITH POWER CONSUMPTION OPTIMIZATION IN MANET**HARPREET KAUR****STUDENT****GURU NANAK DEV ENGINEERING COLLEGE****LUDHIANA****HARMINDER KAUR****ASST. PROFESSOR****GURU NANAK DEV ENGINEERING COLLEGE****LUDHIANA****ABSTRACT**

As technology rapidly increases, diverse sensing and mobility capabilities have become readily available to devices and consequently mobile adhoc networks (MANETs) are being deployed to perform a number of important tasks. The energy efficiency at individual nodes is the key concern in MANET. We propose a hybrid protocol comprising of LEACH and EPAR (efficient Power Aware Routing) i.e. LEPAR (Leach efficient Power Aware Routing). In contrast to conventional power aware algorithms, LEPAR identify the capacity of node not just by its residual battery power, but also by the expected energy spent in reliably forwarding data packets over a specific link. This protocol must be able to handle high mobility of nodes which often cause change in the network topology. Our proposed scheme reduces for more than 10% of the total energy consumption.

KEYWORDS

Manet, energy saving, power consumption optimization.

I. INTRODUCTION**MOBILE ADHOC NETWORK**

Communication nowadays has become very important for exchanging information between people from one place to anywhere at any time.[1] A mobile ad hoc network (MANET) is a collection of randomly moving wireless nodes within a particular area. In cellular networks, there are fixed base stations but in MANET. There is not any fixed base-stations to support routing and mobility management. These mobile devices are equipped with wireless transmitter and receivers that allow them to communicate with each other without the help of wired base stations. Therefore effective range of each transmitter is limited and distant nodes communicate through multihop paths with other nodes in the middle as routers.[2]

Therefore those mobile devices are battery driven and increasing the battery lifetime has become an important aim. Recently Most of the researchers have started to consider power-aware development of efficient algorithms for MANETs. As the routing function is performed by each mobile node in a MANET for establishing communication among different mobile nodes, the vanishing of even a few of the nodes due to power exhaustion might cause disconnect of services in the entire MANETs, because Mobile nodes in MANETs are battery driven. Thus they suffer from limited energy level problems.[4] In such a network, each node acts as a host and may act as a router. Multiple hops may be needed to exchange data between nodes in the network due to the limited transmission range of wireless network interfaces. Because of the frequent changes in the network topology and limited network resources, link failure can occur during routing in MANET more oftenly.[3] There are two major reasons of link breakage in such a network :

- Node dying with energy exhaustion
- Node moves out of the radio range of other node [1]

II. ROUTING SCHEMES

In an ad hoc network, Mobile nodes use multi hop wireless link to communicate with each other. There is no stationary infrastructure and no base station. Each node in the network also act as a router, forwarding data packets for other nodes. Deployment of dynamic routing protocols is a research issue in the design of ad hoc network. High degree of node mobility often change the network topology so that routing protocol must be able to keep up with that. In large networks, flat routing schemes produce an plethora of information that can saturate the network. Nodes with large computational and communication power and powerful batteries are more suitable for supporting the ad hoc network routing than other nodes.[5]

PERFORMANCE PARAMETERS

The following terms are used to evaluate the performance of routing protocols:

- **Stability Period:** Stability period or stable region is the time interval between the start of the network operation and the death of the first sensor node.
- **Instability Period or Unstable Region:** The time interval between the death of first node and the death of the last sensor node is called instability Period or Unstable Region.
- **Network Lifetime:** Network lifetime is the time interval between the start of the network operation and the death of the last sensor node.
- **Number of Cluster Heads per round:** cluster heads selected from the total number of nodes from the whole network in each round. These cluster heads collect the data from member nodes and then send these data, after aggregation, to the sink.
- **Number of Alive Nodes:** The total number of sensor nodes that have not yet depleted all of their energy.
- **Number of Dead Nodes:** The total number of sensor nodes that are not able to do any kind of functionality and have consumed all of their energy.
- **Throughput:** The throughput is defined as the rate of data sent from the cluster heads to the sink. It may also be defined as the rate of data sent from member nodes to their respective cluster heads.
- **Reliability:** The term reliability depends upon the measurement of the stable region and the unstable region. The meaning of better reliability means larger stable region and smaller unstable region.
- There is a trade-off between network lifetime and reliability. Network lifetime includes both unstable and stable regions. For the same stable region, a smaller unstable region means more reliability but a shorter network lifetime.

III. RELATED RESEARCH WORK

Dynamic Source Routing (DSR) is a routing protocol for wireless mesh networks. It is similar to AODV in that it forms a route on-demand when a transmitting node requests one. However, it uses source routing instead of relying on the routing table at each intermediate device.

Determining source routes requires accumulating the address of each device between the source and destination during route discovery. The accumulated path information is cached by nodes processing the route discovery packets. The learned paths are used to route packets. To accomplish source routing, the routed

packets contain the address of each device the packet will traverse. This may result in high overhead for long paths or large addresses, like IPv6. To avoid using source routing, DSR optionally defines a flow id option that allows packets to be forwarded on a hop-by-hop basis. Energy Profile Aware Routing (EPAR), which consists in the minimization of the overall energy consumption based on the EP of network devices and the actual traffic load.

In the above mentioned block diagram there the process of DSR is first improved using EPAR algorithm to enhance the energy efficient output. With this merging of processes we are able to enhance the output of the system in Large sized networks only but we were required the improvement in all sizes of the networks i.e. in small as well as moderate sized networks. So firstly we implemented LEACH algorithm in EPAR which is a cluster based algorithm. LEACH stands for Low-Energy Adaptive Clustering Hierarchy. LEACH is the network protocol that uses hierarchical routing for wireless sensor networks to increase the life time of network. All the nodes in a network organize themselves into local clusters, with one node acting as the cluster-head. LEACH incorporates randomized rotation of the high-energy cluster-head position such that it rotates among the sensors in order to avoid draining the battery of any one sensor in the network. In this way, the energy load associated with being a cluster-head is evenly distributed among the nodes. When we merged the two processes EPAR and LEACH a new algorithm formed and named as LEPAR. This LEPAR is now re-merged to DSR process and now we achieved a new improved algorithm which is highly efficient and is very useful and energy efficient not only in the large networks but also in the moderate and small networks effectively

A. LEACH (LOW ENERGY ADAPTIVE CLUSTERING HIERARCHY)

LEACH is one of the first cluster-based routing protocols.[9] It is most popular hierarchical routing protocol for [10] MANET. LEACH is based on a hierarchical clustering structure model and energy efficient cluster-based routing protocols for sensor networks. In this routing protocol, nodes self-organize themselves into several local clusters, each of which has one node serving as the cluster-head. In order to prolong the overall lifetime of the sensor networks, LEACH changes cluster heads periodically. Clustering in mobile adhoc networks as virtual partitioning of the dynamic nodes into various groups. [6] Cluster based routing is a good solution to address nodes heterogeneity and to limit the amount of routing information that propagates inside the network. The idea behind clustering is to group the network nodes into a number of overlapping clusters. Clustering makes possible a hierarchical routing in which paths are recorded between clusters instead of between nodes.[11] This increases the routes lifetime therefore decreasing the amount of routing control overhead. Inside the cluster one node that coordinates the cluster activities is clusterhead (CH). Inside the cluster, there are ordinary nodes also that have direct access only to this one clusterhead and gateways. Gateways are nodes that can hear two or more clusterheads.[7]

Ordinary nodes send the packets to their cluster head that either distributes the packets inside the cluster or (if the destination is outside the cluster) forwards them to a gateway node to be delivered to the other clusters. By replacing the nodes with clusters, existing routing protocols can be directly applied to the network. Only gateways and cluster heads participate in the propagation of routing control/update messages. In dense networks this significantly reduces the routing overhead thus solving scalability problems for routing algorithms in large ad hoc networks.[8]

B. EPAR (EFFICIENT POWER AWARE ROUTING) PROTOCOL

This is one of the more obvious metrics . To conserve energy, there should minimize the amount of energy consumed by all packets traversing from source node to destination node. i.e. we want to know the total amount of energy the packets consumed when it travels from each and every node on the route to the next hop. The energy consumed for one packet is calculated by the equation

$$E_c = \sum_{l=1}^k T n_l, n_{l+1}$$

E_c = Energy consumed by one packet
 T = Energy consumed in Transmitting and receiving a packet over one hop.
 n_l and n_k = nodes in route

The main objective of EPAR is to minimize the variation in the remaining energies of all the nodes and thereby increase the network lifetime.

ROUTE DISCOVERY AND MAINTENANCE IN EPAR ALGORITHM

For EPAR, however, the path is chosen based on energy. Firstly, they calculate the battery power for each path, that is, the lowest hop energy of the path. The path is then selected by choosing the path with the maximum lowest hop energy. For example, consider the following scenario. There are two paths to choose from. The first path contains three hops with energy values 22, 18, and 100, and the second path contains four hops with energy values 40, 25, 45, and 90. The battery power for the first path is 18, while the battery power for the second path is 25. Because 25 is greater than 8, the second path would be chosen. EPAR algorithm is an on demand source routing protocol that uses battery lifetime prediction. In Fig. , DSR selects the shortest path AEFD or AECD and MTPR selects minimum power route path AEFD. But proposed EPAR selects ABCD only, because that selected path has the maximum lifetime of the network (1000s). It increases the network lifetime of the MANET shown in equation . The objective of this routing protocol is to extend the service lifetime of MANET with dynamic topology. This protocol favors the path whose lifetime is maximum .

$$\text{Max}_k T_k t = \text{Min}_{i \in k} T_i t$$

Where $T_k(t)$ = lifetime of path k

$T_i(t)$ = predicted lifetime of node l in path k

Proof :

1. $T_k(0) = \text{Min } T_i(0) = \text{Min } (T_A(0), T_B(0), T_C(0), T_D(0))$
 $T_k(0) = \text{Min } (T_i(0)) = \text{Min } (800, 1000, 400, 200) = 200$
2. $T_k(0) = \text{Min } T_i(0) = \text{Min } (T_A(0), T_B(0), T_C(0), T_D(0))$
 $T_k(0) = \text{Min } (T_i(0)) = \text{Min } (800, 700, 400, 200) = 200$
3. $T_k(0) = \text{Min } T_i(0) = \text{Min } (T_A(0), T_B(0), T_C(0), T_D(0))$
 $T_k(0) = \text{Min } (T_i(0)) = \text{Min } (800, 700, 100, 200) = 100$

Hence $\text{Max}_k T_k = 200, 200, 100 = 200$

This approach is a dynamic distributed load balancing approach that avoids power congested nodes and choose lightly loaded paths.

IV. SIMULATION SETUP AND RESULTS DISCUSSION

Simulations were conducted using MATLAB. The Simulated network consist of 120 nodes randomly deployed . Nodes are moving at six different uniform speeds ranging between 0 to 10 m/s and uniform pause time of 10s.

FIG. 2: RANDOM DEPLOYMENT OF NODES

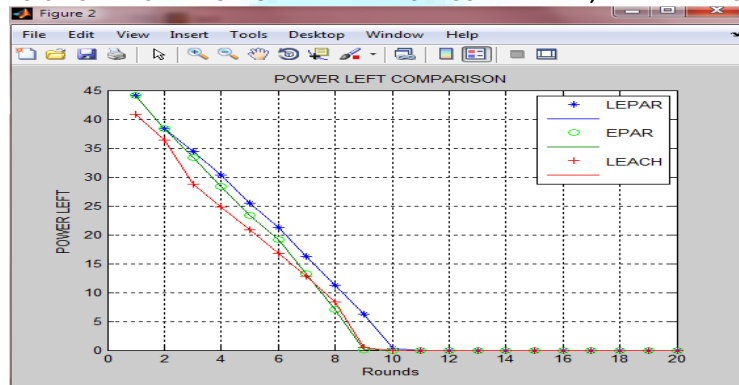

V. SIMULATION RESULTS

POWER LEFT COMPARISON

Figure 3 shows the total number of power left after each round of LEACH, EPAR & LEPAR. The LEPAR protocol has the overall network life of 10 rounds, while EPAR and LEACH has network life of 7 and 9 rounds respectively. This shows that our proposed protocol is about 30% and 10% better network lifetime than LEACH and EPAR respectively.

FIG. 3: TOTAL NUMBER OF POWER LEFT IN EACH ROUND IN LEPAR, EPAR AND LEACH

POWER CONSUMPTION COMPARISON

FIG. 4: TOTAL NUMBER OF POWER CONSUMED

This comparison is just like the power left it is just that it measures otherwise.

VI. CONCLUSION

Sensors are required to routing packets as well as transmit the data to the base station. If more of these operations are performed the sensor battery life decays drastically. By using the proper communication protocol, the control of congestion and unnecessary data transmission or reception can help in better management of battery life. By considering the influencing factors such as congestion, energy awareness, scalability and latency, the purpose of this research is to find a congestion free energy efficient routing protocol for Wireless Sensor Networks. In this paper , we proposed an optimized routing scheme for MANETs. The main focus was to provide the congestion free and Energy efficient protocol. In our proposed scheme, LEPAR is used in MANETs. In LEPAR, we have removed the issues that we had found out in problem formulation. LEPAR as an improvement to DSR in MANETs improves upon the energy and QoS in Moderate and small sized Networks.

VII. FUTURE WORK

In Future the issue which is to be resolved is that it is mandatory for us to think of solutions which are of different magnitude and which applicable for all kind of scenarios. After this work we would also like to work upon an Idea of a protocol which generated great power efficiency in all forms of a network. Thus creating a protocol which is as efficient as EPAR in large networks will be the Future objective.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Computer Application & Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail infoijrcm@gmail.com for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail infoijrcm@gmail.com.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-
Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
