CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Education, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Management Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email address: infoijrcm@gmail.com.

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR
IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF.

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript entitled ' _____ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

NAME OF CORRESPONDING AUTHOR:

Designation:

Affiliation with full address, contact numbers & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

NOTES:

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:
New Manuscript for Review in the area of (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers**, and **email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

INTRODUCTION

REVIEW OF LITERATURE

NEED/IMPORTANCE OF THE STUDY

STATEMENT OF THE PROBLEM

OBJECTIVES

HYPOTHESES

RESEARCH METHODOLOGY

RESULTS & DISCUSSION

FINDINGS

RECOMMENDATIONS/SUGGESTIONS

CONCLUSIONS

SCOPE FOR FURTHER RESEARCH

ACKNOWLEDGMENTS

REFERENCES

APPENDIX/ANNEXURE

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure**. **Sources of data should be mentioned below the table/figure**. It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use (ed.) for one editor, and (ed.s) for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - The location of endnotes within the text should be indicated by superscript numbers.

PEHOWA

ABSTRACT

Indian economy faces an Herculean task of shifting labour force from agriculture sector to manufacturing, which is not possible without increasing the labour productivity and expanding the manufacturing itself. The slow growth of labour employment, its share and contribution in output, increasing capital intensity and low total factor productivity is cause of serious concern. The manufacturing sector can not attract skilled manpower unless it offers a fair share to its employees in the form of wages, salaries, old age benefits and social security. The present paper is an attempt to study the trend of share of labour in organised Indian manufacturing sector during period 1981-82 to 2010-11. We use ASI data at aggregate level to estimate a long run Cobb-Douglas production function and to compute Solow equation. The share of labour has been reduced to a quarter in 2010-11 from about a half in 1981-82 whereas the marginal productivity of labour has doubled in the same period. Although average wage rate has increased by 17 times at current prices but just doubled at constant prices during the selected period with hardly one percent growth rate of employment. The marginal productivity of labour increased from twice of average wage rate to four times. The contribution of labour to the manufacturing growth has been falling and more credit goes to the capital taking around 91 percent share. It is proposed that the extension of Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS) to industrial sector and policies to encourage Micro, Small, & Medium Enterprises (MSME)s to become large ones is the key to restructure the base of employment and national income.

Cobb-Douglas Production Function, Marginal Productivity of Labour, Growth Accounting.

1. INTRODUCTION

Indian economy faces an Herculean task of shifting labour force from agriculture sector to manufacturing, which is not possible without increasing the labour productivity and expanding the manufacturing itself. The slow growth of labour employment, its share and contribution in output, increasing capital intensity and low total factor productivity is cause of serious concern. The manufacturing sector can not attract skilled manpower unless it offers a fair share to its employees in the form of wages, salaries, old age benefits and social security. The present paper is an attempt to study the trend of share of labour in organised Indian manufacturing sector during period 1981-82 to 2010-11. A large number of studies are available on growth and labour productivity particularly on organised manufacturing in India. Some important studies are Aggarwal and Kumar (1991), Ahluwalia (1991), Balakrishnan and Pushpangadan (1994), Balakrishnan and Babu (2003), Banga (2005), Bidhe and Kalirajan (2004), Gangopadhyay and Wadhwa (1998), Goldar (1986 and 2000), and by Trivedi, Prakash, & Sinate (2000). However, most of other studies not quoted here focus on specific industries and not on manufacturing sector as a single entity. The rest of the paper is divided into three sections – research methodology, presentation of data and results & discussion.

2. RESEARCH METHODOLOGY

The present study uses secondary data from ASI at all India aggregated level on organised manufacturing sector from 1981-82 to 2010-11. The WPI has been computed using GDP at constant and current prices provided by RBI website in Handbook of Statistics on Indian Economy. The data has been taken on net value added as a measure of output (Q), number of employees as a measure of labour input (L), total invested capital (K), total emoluments as a measure of wage bill, interest paid and loans. To measure the contribution of labour, capital and technical progress in growth of output Solow equation in following form has been computed:

$$dQ/Q = dA/A + \alpha dL/L + \beta dK/K \quad \dots(i)$$

where Q, L and K are output, Labour & Capital respectively and A, α , and β are measures of technical progress, share of labour and share of capital respectively. The following form of Cobb-Douglas production function has been used:

$$Q = A L^\alpha K^\beta e^{\gamma T} \quad \dots(ii)$$

where A, α , β and γ are parameters showing total factor productivity, labour elasticity of output, capital elasticity of output and technical progress rate respectively. Following six regression equations have been estimated:

- 1) $\ln Q/L = \ln A + \beta \ln (K/L) + u$
- 2) $\ln Q/L = \ln A + \beta \ln (K/L) + \gamma T + u$
- 3) $\ln Q = \ln A + \alpha \ln L + \beta \ln K + u$
- 4) $\ln Q = \ln A + \alpha \ln L + \beta \ln K + \delta \ln Q_{t-1} + u$
- 5) $\ln Q = \ln A + \alpha \ln L + \beta \ln K + \gamma T + \delta \ln Q_{t-1} + u$

It is clear that Reg1 and Reg2 assume a constant returns to scale and this assumption has been relaxed in Reg3 and Reg4. However, at the time of analysis, it was noted that there exists serious autocorrelation in first four regressions which has been removed by entering the lagged variable Q_{t-1} in the production function. The marginal productivity of labour has been computed by differentiating the estimated production function.

3. PRESENTATION OF DATA AND RESULTS

It will be useful to have a glimpse of the major trends of organised manufacturing sector in India before starting analysis. We observe from Table I that it had an investment of Rs. 23.94 lakh crore employing 1.26 crore persons in 211660 factories in 2010-11. The number of factories have almost doubled growing at CAGR of 1.87 percent in the selected period of study i.e. 1981-82 to 2010-11. But number of employees have grown only 1.62 times at a CAGR of 1.11 percent whereas the total invested capital at current prices has gone up by more than 44 times at CAGR of 12.05 percent during the same period. This explains the reason for

increasing capital-labour ratio (K/L) in Table II. The industry needed just Rs 3.65 lakhs per labour in 1982 and now it needs Rs 12.93 lakhs investment for each worker at constant prices. The average number of employees per factory has been decreasing at a rate of 0.76 percent. Although the average wage rate also went up by 17 times at current prices but only doubled at constant prices during the period of study. The increasing capital-labour ratio (K/L) can be explained in terms of relatively increasing average wage rate and cost of capital ratio (w/r). (See Table II) It is also found that there is a medium, positive and significant correlation (0.581) between K/L and w/r ratios. It may be possible that the increasing prices of land, cost of doing business, higher fuel prices, shifting demand towards hi-tech products, stringent labour laws, liberalised economic policies with relatively cheaper financial capital has led to employment of capital intensive technologies, thereby causing slow growth of employment and falling share of labour. With these arguments, we do not suggest that the demand for labour should be increased by making it relatively cheaper, rather it implies that whole demand curve of labour should be shifted rightwards by broadening the industrial base, increasing its share in GDP and be made more inelastic by skill addition.

Further, to estimate the contribution of labour and capital to growth of net value added by the manufacturing sector, we present the results of Solow growth accounting equation in Table III. It can be seen that the contribution of labour to average 14.9 percent growth in net valued added is just 4.45 percent because its share (β) is 0.345 and average growth of employment is only 1.8 percent. However, the contribution of labour to growth depends on what it gets and not what it produces. For that, we need to find out the marginal product of labour assuming whole manufacturing sector as a single firm. Therefore, we have estimated the Cobb-Douglas production function using regression analysis as mentioned in research methodology and its results are given in Table IV.

Firstly, It is important to note that we get fairly high values of R^2 , Adjusted R^2 and F-ratios in all the six regressions implying that our list of selected independent variables is sufficient to explain most variation in the dependent variable. Since all the independent variables differ with each other in nature hence the problem of multicollinearity does not arise. In this time series data, since the dependent variable changes very slowly after taking a natural log hence, it is safe to assume the absence of heteroscedasticity. However, the problem of autocorrelation can not be ignored as we get very low D-W ratio in first four regressions and while interpreting, we keep in mind that the results of these regressions are biased. Even then, many useful deductions can be made. The Reg1 shows that in the given period the net value added has been increased by 1.202 percent with every one percent increase in capital with assumption of constant returns to scale (CRS). The coefficient of total factor productivity for Reg1 is 0.484 (Antilog of -0.725). In Reg2, along with CRS it is also assumed that we impute all growth of net value added to technical progress rate which is 3.95 per cent, which forces the initial estimate of Q (i.e. antilog of A) to almost zero and capital elasticity of output (β) to a low and insignificant level. In Reg3, the assumption of CRS is relaxed, and the labour, capital and technical progress have been allowed to absorb the variation in Q. It can be seen that labour elasticity of output (β) and technical progress rate are so large that they absorb maximum variation making β again low and insignificant. This regression has some important meaning because if we assume that the technology really lies in the skills of labour then maximum value generation activity has been done by the employees and technical progress and not by capital. It may noted that DW ratio has improved but still showing presence of some positive autocorrelation. In Reg4, when we try to explain the variation in Q with labour, capital and total factor productivity, we find that capital alone absorbs maximum variation leaving β insignificant and A small but significant. But low DW ratio suggests not to trust this model. Thus, in Reg5 and Reg6, the lagged value of net valued added i.e. Q_{t-1} has been introduced as explanatory variable to fix the problem of autocorrelation. Although, Reg6 has highest DW, but it gives almost zero value of A, which is away from reality. Considering all parameters, as it has high R^2 , Adj- R^2 , DW in reasonably acceptable limit, high F-ratio and significant values of β , α and A with theoretically expected signs and values, we can choose Reg5 to measure marginal productivity of labour.

TABLE I: TRENDS OF FACTORIES, EMPLOYEES AND CAPITAL AND WAGES IN ORGANISED MANUFACTURING SECTOR

Year	No. of Factories	No. of Employees	Invested Capital (Rs. Lakhs)	Average no. of Employees per factory	Average Wage Rate at Current prices in Rs	Average Wage Rate at Constant prices in Rs
1982	105037	7777868	5399127	74.05	8714	45873

Source: Based on ASI data

Source: Prepared by Researchers based on Table II

The marginal productivity of labour has been shown in Table II along with other variables. Now, it becomes evident that marginal productivity of labour has been grown at CAGR of 4.84 per cent which is double than the growth rate of average wages. Thus marginal product of labour which was twice the wages in 1982 has become four times in 2011. It is clear that the employees in manufacturing sector are not getting a fair share.

4. DISCUSSION

The present paper does not divide the period of analysis into pre-reform or post-reform eras as has been done in a number of studies on manufacturing sector. Because, we do not intend to seek the reasons of low share of employees in value added in the economic reforms. However, now many of us agree that the reform process did not focus on accelerating the employment in organised sector rather converse is true. It has also been a consensus that it was not the foreign investment but domestic animal spirits of the entrepreneurs which contributed to the India growth story. The share of workers i.e. their wages and number in employment can be increased only by facilitating the employers. We also observe that huge sums have been allocated for the Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS). The implementers – Deputy Commissioners, Block Development Officers and Village heads are not creative enough to use the funds available for the scheme efficiently. If the scope of the MGNREGS is shifted from construction works in the rural areas to manufacturing sector, it will provide a big impetus to the industry and will help shifting the rural labour from primary activities to more value adding activities. The state can easily collect relevant records within a small time from the manufacturing sector (organised and unorganised) about employees. Then, it can offer that a part of wages to newly employed workers shall be financed by the state for certain period through funds of MGNREGS. It shall make micro, small and medium enterprises (MSMES) more competitive enabling them to become large. It is also noted that the size of the firm is most important factor leading to skill development and an average higher wage rate. Conclusively, we propose that the extension of MGNREGS to industrial sector and policies to encourage MSMES to become large ones is the key to restructure the base of employment and national income.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Commerce, Economics and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail **info@ijrcm.org.in** for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail infoijrcm@gmail.com.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-

Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
