CALL FOR MANUSCRIPTS

We invite unpublished novel, original and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Education, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Management Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email address: infoijrcm@gmail.com.

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR
IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF:

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript entitled ' _____ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

NAME OF CORRESPONDING AUTHOR:

Designation:

Affiliation with full address, contact numbers & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

NOTES:

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:
New Manuscript for Review in the area of (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers**, and **email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

INTRODUCTION**REVIEW OF LITERATURE****NEED/IMPORTANCE OF THE STUDY****STATEMENT OF THE PROBLEM****OBJECTIVES****HYPOTHESES****RESEARCH METHODOLOGY****RESULTS & DISCUSSION****FINDINGS****RECOMMENDATIONS/SUGGESTIONS****CONCLUSIONS****SCOPE FOR FURTHER RESEARCH****ACKNOWLEDGMENTS****REFERENCES****APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use (ed.) for one editor, and (ed.s) for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - The location of endnotes within the text should be indicated by superscript numbers.

PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:**BOOKS**

- Bowersox, Donald J., Closs, David J., (1996), "Logistical Management." Tata McGraw, Hill, New Delhi.
- Hunker, H.L. and A.J. Wright (1963), "Factors of Industrial Location in Ohio" Ohio State University, Nigeria.

ABSTRACT

The efficient performance of engineering graduates in corporate sectors and the undergraduate scholars in their respective institutions greatly depends upon their stress levels. Most of the works in the engineering profession require the use of computers. Many professionals have a doubt whether the use of computers, continuously over a long period of time may affect their day to day activities or routine life, particularly computer engineers and those who work in the field of information technology. Our paper tries to find the effect of computer operating hours on stress levels of undergraduate scholars of computer science and civil engineering. Multi Criteria Decision Making (MCDM) tool called Technique of Order Preference by Similarity to Ideal Solution (TOPSIS) has been used to identify the stressed professionals.

KEYWORDS

Decision making, Stress, TOPSIS and undergraduate students.

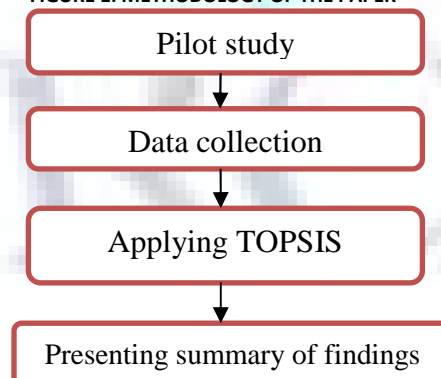

1.0 INTRODUCTION

Multiple criterion decision making (MCDM) ^[1] refers to making decisions in the presence of multiple, usually conflicting criteria and constraints. The decision making is more challenging today. Necessary conditions for achieving efficient decision making consist in understanding the current and upcoming events and factors influencing the whole problem environment, in exploring the nature of decision-making processes and the reach of different typologies of methods and techniques, and finally in structuring appropriately the decision-making approach based on a wide range of issues related to problem environment.

2.0 METHODOLOGY

The methodology of the paper is presented below,

FIGURE 1: METHODOLOGY OF THE PAPER

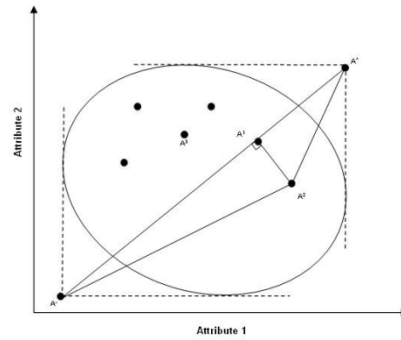

The methodology of the paper involves the pilot study, identifying the factors which causes stress, designing questionnaire, distribution of questionnaire, data collection, applying TOPSIS, presenting summary of findings and finally suggestions to reduce the stress.

3.0. TECHNIQUE OF ORDER PREFERENCE BY SIMILARITY TO IDEAL SOLUTION (TOPSIS) METHOD

Technique for Order Performance by Similarity to Ideal Solution (TOPSIS), one of known classical MCDM method, was first developed by Hwang and Yoon ^[4] for solving a MCDM problem. TOPSIS, known as one of the most classical MCDM methods, is based on the idea, that the chosen alternative should have the shortest distance from the positive ideal solution (PIS) and on the other side the farthest distance of the negative ideal solution (NIS) in a geometrical (Euclidean) sense. The TOPSIS-method will be applied to a case study, which is described in detail. The TOPSIS has two main advantages: its mathematical simplicity and very large flexibility in the definition of the choice set.

FIGURE 2: EUCLIDEAN DISTANCE TO PIS AND NIS IN TWO-DIMENSIONAL SPACE

4.0 PILOT STUDY

“The Week”, June 29, 2008 [5]. A survey conducted in 2008 says that 16000 students in India committed suicide between 2004 and 2008. Stress gradually collapses the personality of an individual. The person affected with stress feels like mentally weak. Stress thus affects the day today activities and one day the individual attains the state that he or she could not concentrate on the routine duty. The individual finally enters the state of unbearable anxiety where he feels or behaves completely detached from the society, family and friends.

Academic stress has been studied extensively as an important factor in college student adjustment. In general, college-related stress has been found to be inversely related to academic performance among traditional undergraduates. Stress has also been identified as a factor negatively affecting performance for college students.

College students have many obstacles to overcome in order to achieve their optimal academic performance. It takes a lot more than just studying to achieve a successful college career. Different stressors such as time management, financial problems, sleep deprivation, social activities, and for some students even having children, can all pose their own threat to a student’s academic performance.

4.1 QUESTIONNAIRE DESIGN

The questionnaire is designed based on the following factors,

4.1.1 INSTITUTIONAL FACTORS

Institution is one of the main sources of stress among students. Such stress comes from plenty of assignments, unsatisfactory academic performance, preparation for tests, lack of interest in a particular subject, and teacher’s punishment, language problem during discussion with staff members, noisy classrooms and friend’s disturbances.

4.1.2 PERSONAL FACTORS

Personal factors play a main role in causing stress. Some of the personal factors are family economic problem, headache, lack of facilities, personal feelings, intolerance for failures, feelings of privacy lost, too much work in holidays, not sound in English fluency and poor time management

4.1.3 ENVIRONMENTAL FACTORS

Environmental factors are also one of the reasons for stress. Some of the factors are travelling between college and residence, waiting for bus, conflict with conductors, traffic jam, railway crossing, breakdown and crowd in bus.

5.0 CRONBACH’S ALPHA ANALYSIS

Cronbach’s alpha is a coefficient (a number between 0 and 1) that is used to rate the internal consistency (homogeneity) or the correlation of the items in a test. A good test is one that assesses different aspects of the trait being studied. If a test has a strong internal consistency most measurement experts agree that it should show only moderate correlation among items (.70 to 0.90).

If correlations between items are too low, it is likely that they are measuring different traits (e.g. both depression and quality of life items are mixed together) and therefore should not all be included in a test that is supposed to measure one trait. If item correlations are too high, it is likely that some items are redundant and should be removed from the test.

Cronbach’s α is defined as

$$\alpha = \frac{K}{K - 1} \left(1 - \frac{\sum_{i=1}^K \sigma_{Y_i}^2}{\sigma_X^2} \right)$$

where K is the number of components (K-items or testlets), σ_X^2 the variance of the observed total test scores, and $\sigma_{Y_i}^2$ the variance of component i for the current sample of persons.

The higher the score, the more reliable the generated scale is. Nunnally (1978) has indicated 0.7 to be an acceptable reliability coefficient.

5.1 CRONBACH’S ALPHA RESULT FOR ORGANIZATIONAL STRESS ASSESSMENT QUESTIONNAIRE

The questionnaire contains 12 items, out of which 4 are physical symptoms, 4 are behavioural symptoms and 4 are mental symptoms. stress symptoms were rated according to the frequency in 5 scales (from 1 to 5). 5- Very often 4- Often 3- Some times 2- Seldom 1- Never.

Cronbach’s alpha result Organizational stress assessment questionnaire

Scale: ALL VARIABLES

TABLE 1: CASE PROCESSING SUMMARY

		N	%
Cases	Valid	100	100.0
	Excluded ^a	0	.0
	Total	100	100.0

List wise deletion based on all variables in the procedure.

ABLE 2: RELIABILITY STATISTICS

Cronbach's Alpha	N of Items
0.793	12

Here, cronbach's alpha value is greater than 0.7. Hence it is proved that the selected questionnaire for organizational stress is reliable.

5.2 SAMPLE SIZE DETERMINATION

In case of finite population stated formula for determining sample size is

$$n = \frac{Z^2 N \sigma^2}{(N-1) e^2 + Z^2 \sigma^2} \tag{1}$$

From our pilot study we have to find out standard deviation of 100 sample is $\sigma_p = 3.3582$

$Z = 1.96$ (from normal distribution table)

$$e = z \sigma_p / \sqrt{n} \tag{2}$$

So, we have to choose our sample size 'n' according to the results obtained from equation 1.

6.0 DATA COLLECTION

It was decided to identify the factors that are causing stress to the students of engineering discipline and to collect the data from the students who are pursuing their under graduation.

The following table shows the factor scores for the students from civil engineering,

TABLE 3 - FACTOR SCORES FOR CIVIL DEPARTMENT STUDENTS (HOSTELLERS)

Student	Institutional	Personal	Environmental
1	15	28	20
2	29	31	30

39	19	20	17
40	12	16	22
41	28	36	31
42	29	33	29

From the above table, it is inferred that the data for various factors are collected from the students of computer science engineering is displayed. By comparing the computer operating hours of CSE students and Civil engineering students, the observations are as follows,

TABLE 7: DATA FOR CSE STUDENTS

S.NO	PLACE	COMPUTER OPERATING HOURS / DAY	COMPUTER OPERATING HOURS / WEEK
1	Institution	3 (Laboratory- 5 days/week)	15
		1 (Library- 5 days/week)	5
2	Home	2 (Monday to Friday)	10
		5 (Saturday and Sunday)	10
TOTAL working hours / week			40

TABLE 8: DATA FOR CIVIL STUDENTS

S.NO	PLACE	COMPUTER OPERATING HOURS / DAY	COMPUTER OPERATING HOURS / WEEK
1	Institution	3 (Laboratory- only on 1 day/week)	3
		1 (Library- 5 days/week)	5
2	Home	2	14
TOTAL working hours / week			22

From the above tables, it is identified that the computer operating hours are comparatively high for the computer science engineering students with civil engineering students.

7.0 ANALYSIS USING TOPSIS

The procedure of Technique of Order Preference by Similarity to Ideal Solution is as follows,

Step 1: The weightages for the factors are calculated. To find the relative normalized weight of each criterion, the geometric mean of ith row in the pair-wise comparison matrix is calculated by

$$GM_i = \sqrt[n]{\prod_{j=1}^n X_{ij}} \quad i=1,2, \dots, m \tag{3}$$

Then, geometric means of the rows in the comparison matrix are normalized as:

$$W_i = GM_i / \sum_{i=1}^m GM_i \quad i=1,2, \dots, m \tag{4}$$

Step 2: The normalized decision matrix is constructed. This step converts the various attribute dimensions into non dimensional attributes. An element r_{ij} of the normalized decision matrix R is calculated as follows:

$$R_{ij} = \frac{x_{ij}}{\sum_{i=1}^m x_{ij}^2}, \quad i=1,2, \dots, m; j=1,2, \dots, n$$

Where $N = [R_{ij}]_{m \times n}$ (5)

Step 3: The weighted normalized decision matrix is calculated. The weighted normalized value v_{ij} is calculated as:

$$V_{ij} = w_j r_{ij}, \quad i=1,2, \dots, m; j=1,2, \dots, n$$

Where $V = [v_{ij}]_{m \times n}$ (6)

Step 4: The positive ideal solution and negative ideal solution is identified.

$$A^+ = \{V_1^+, V_2^+, \dots, V_n^+\} = \{(\max_j v_{ij} | i \in I), (\min_j v_{ij} | i \in I^c)\}$$
(7)

$$A^- = \{V_1^-, V_2^-, \dots, V_n^-\} = \{(\min_j v_{ij} | i \in I^c), (\max_j v_{ij} | i \in I)\}$$
(8)

Step 5: The separation measure is finally calculated. In this step the concept of the n-dimensional Euclidean distance is used to measure the separation distances of each alternative to the ideal solution and negative-ideal solution. The corresponding formulas are

The separation from the positive ideal alternative is:

$$S_i^+ = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^+)^2}, \quad i=1,2, \dots, m. \tag{9}$$

Similarly, the separation from the negative ideal alternative is:

$$S_i^- = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^-)^2}, \quad i=1,2, \dots, m \tag{10}$$

Step 6: Calculate the relative closeness to the ideal solution. The relative closeness of the alternative A_i with respect to A^* is defines as:

$$C_i^* = \frac{S_i^-}{S_i^+ + S_i^-}, \quad i=1,2, \dots, m \tag{11}$$

Where $0 \leq C_i^* \leq 1$ that is, an alternative i is closer to A^* as C_i^* approaches to 1.

Step 7: The preference order is ranked. Choose an alternative with maximum C_i^* or rank alternatives according to C_i^* in descending order.

8.0 RESULTS

The TOPSIS results are shown below for both the civil engineering and computer science engineering students, The following table shows the TOPSIS scores for the civil engineering students (Day scholars)

TABLE 9 - FACTOR SCORES FOR CIVIL ENGINEERING STUDENTS (DAY SCHOLARS)

Rank	Student no	Ci* value
1	1	0.809
2	42	0.809

24	24	0.552
25	17	0.534
26	23	0.529
27	22	0.527
28	36	0.518
29	3	0.507
30	27	0.506
31	10	0.501
32	35	0.501
33	37	0.461
34	29	0.461
35	11	0.437
36	9	0.376
37	1	0.369
38	5	0.324
39	39	0.283
40	40	0.276
41	26	0.262
42	14	0.176

From the above table, it is inferred that the TOPSIS scores for the computer science engineering students (Hostellers) are displayed. The detailed analysis shows the results as below,

TABLE 13: MAXIMUM STRESSED STUDENTS (DAY SCHOLARS)

Number of stressed students in civil day scholars	9
Number of stressed students in computer science day scholars	19

TABLE 14: MAXIMUM STRESSED STUDENTS (HOSTELLERS)

Number of stressed students in civil day hostellers	8
Number of stressed students in computer science hostellers	16

According to the above table, it is identified that stressed students in civil engineering are low when compared with computer science engineering students. Both the hostellers and days scholars are highly stressed due to institutional factor, personal factor and environmental factor.

10.0 SUMMARY OF FINDINGS

From the above analysis the following findings are made,

- The students of CSE department are subjected to more stress
- The students are subjected to stress as they spare more time with computers
- The maximum stressed students don't have any involvement in physical activities like sports, dance, yoga, NCC, NSS etc...
- The students are suggested and advised to indulge in some stress relieving techniques like listening to music, songs, participate in sports, cultural, dance, etc.
- The students must also start practicing yoga, asanas and meditation.

11.0 CONCLUSION

A study was conducted at an engineering college, situated near Madurai. The parameters chosen for the analysis are personal, institutional and environmental factors. The Multi Criteria Decision Making tool called Technique of Order Preference by Similarity to Ideal Solution (TOPSIS) has been applied to identify the maximum stressed students from the departments of civil engineering and computer science engineering from both day scholars and hostellers. The comparative table reveals that computer science engineering students are highly stressed compared to civil engineering students. It is advised to practice stress relieving techniques and participating in extra-curricular activities to reduce the stress.

12.0 FUTURE WORK

The analysis will also be done for other undergraduate disciplines too. The same analysis might be conducted at various institutions like arts, medical and so on. Validation might also be done by using other Multi Criteria Decision Making (MCDM) tools like Fuzzy logic Decision Making Approach, DEA, ANN and so on.

13.0 ACKNOWLEDGEMENT

The authors are happily expressing their gratitude to Dr. Jawahar, N, Professor in Mechanical Engineering and Dean of Research and Development for his motivation in learning and applying the MCDM tools. The authors also take pride in recording the valuable support given by Dr. Muruganandham, C, Professor and Head in Mechanical Engineering, Thiagarajar College of Engineering, Madurai.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Commerce, IT and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail i.e. infoijrcm@gmail.com for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail infoijrcm@gmail.com.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-

Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
