## **CALL FOR MANUSCRIPTS**

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Education, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Management Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email address: [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com).

## **GUIDELINES FOR SUBMISSION OF MANUSCRIPT**

### 1. **COVERING LETTER FOR SUBMISSION:**

DATED: \_\_\_\_\_

**THE EDITOR**  
IJRCM

**Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF**

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

**DEAR SIR/MADAM**

Please find my submission of manuscript entitled '\_\_\_\_\_ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

#### **NAME OF CORRESPONDING AUTHOR:**

Designation:

Affiliation with full address, contact numbers & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

#### **NOTES:**

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:  
**New Manuscript for Review in the area of** (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers, and email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

**INTRODUCTION**

**REVIEW OF LITERATURE**

**NEED/IMPORTANCE OF THE STUDY**

**STATEMENT OF THE PROBLEM**

**OBJECTIVES**

**HYPOTHESES**

**RESEARCH METHODOLOGY**

**RESULTS & DISCUSSION**

**FINDINGS**

**RECOMMENDATIONS/SUGGESTIONS**

**CONCLUSIONS**

**SCOPE FOR FURTHER RESEARCH**

**ACKNOWLEDGMENTS**

**REFERENCES**

**APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure**. **Sources of data should be mentioned below the table/figure**. It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
  - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
  - Use (ed.) for one editor, and (ed.s) for multiple editors.
  - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
  - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
  - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
  - For titles in a language other than English, provide an English translation in parentheses.
  - The location of endnotes within the text should be indicated by superscript numbers.

**PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:**

**BOOKS**

- Bowersox, Donald J., Closs, David J., (1996), "Logistical Management." Tata McGraw, Hill, New Delhi.

# MEASURING SERVICE QUALITY AND CUSTOMER SATISFACTION USING SERVQUAL: AN EMPIRICAL STUDY IN HOSPITALITY INDUSTRY OF BANGLADESH

MD. SHARIFUL ALAM

LECTURER, SCHOOL OF BUSINESS, PRESIDENCY UNIVERSITY, DHAKA; &

RESEARCH SCHOLER

SCHOOL OF MANAGEMENT

WUHAN UNIVERSITY OF TECHNOLOGY

WUHAN, P.R CHINA

## ABSTRACT

It goes without saying that service quality is one of the most important factors to make the consumers satisfied. But there is a big confusion regarding how this service quality can be measured so that it can be improved to ensure customer satisfaction. This document explains and demonstrates how the latent variables of service quality can be identified and how these factors affect customer satisfaction. These variables have been identified empirically through factor analysis. To find the gap between customer expectation and perception SERVQUAL model has been applied from a different dimension. Finally to measure how these latent factors affect customer satisfaction we have tested the null hypothesis that these latent variables don't have significant impact on customer satisfaction using multiple regression analysis. The empirical findings offer the evidence of a significant relationship between service quality and customer satisfaction in hospitality industry in Bangladesh.

## KEYWORDS

Gap analysis, Satisfaction, Service quality, SERVQUAL.

## INTRODUCTION

Customer relationship marketing (CRM) enhances the service quality thus providing the sense of increased perceived service quality. The SERVQUAL method has been used in many settings to assess the quality of service. By measuring expectations, perceptions, and satisfaction level on the dimensions of Reliability, Assurance, Tangibles, Empathy and Responsiveness, this paper aims to assess service quality of hotel in Bangladesh in order to facilitate the service providers so that they can provide better service to the customers especially the tourists and successfully integrate CRM with it. Researchers have paid little attention on service quality in a hospitality industry like hotel where service quality can have a great impact on customer satisfaction and retention. Hence there is a need to investigate whether service quality has a significant impact on hotel industry and whether it can have significant impact on customer satisfaction and retention.

## METHODOLOGY

Clients' perceptions seem to be largely ignored by hotel authority. Therefore, this study is a customer-centered one and focuses on examining service quality indicated by differences of clients' expectations and perceptions. It also examines the link between clients' perception and their overall satisfaction with hotel services. Respondents were interviewed using a SERVQUAL (Service quality) questionnaire proposed by Parasuraman (Parasuraman et al., 1985, Parasuraman et al., 1991).

SERVQUAL and hotel service quality dimensions were taken into consideration under the inspiration of previous studies. Even though SERVQUAL presents general quality dimensions for service industries, it does not include specific dimensions for each service branch (Pakdil and Ayn, 2007). Still we have followed the basic as this type of research is relatively new in the country.

The perceived service quality has been measured by the following equation:

$Q = P_x - E_x$ . Here Q stands for Perceived quality of service; and  $P_x$  and  $E_x$  are ratings to perceptions and expectations respectively. In addition to this model a regression model has been used to examine significant elements influencing clients' overall satisfaction. The model can be expressed below:

$$S = \beta_0 + \beta_1 E + \beta_2 T + \beta_3 R + \beta_4 A + \beta_5 Res + \epsilon$$

Where,

S=Overall Satisfaction, E=Empathy, T=Tangibles, R=Reliability, A=Assurance, Res=Responsiveness,  $\beta_0$ =intercept,  $\beta_1$ = regression coefficient,  $\epsilon$ = stochastic error term

On the basis of literature review, a primary questionnaire was developed. The questionnaire design follows the SERVQUAL (Parasuraman, 1991) instrument (Reliability, Assurance, Tangibles, Empathy and Responsiveness) by using a 5-point Likert scale with "1" being "Strongly Disagree" and "5" being "Strongly Agree". Out of 279 questionnaires 236 have been returned. Finally 197 questionnaires have been selected for analysis after rejecting the incomplete questionnaires. Excel and SPSS have been used for the mathematical computation.

Considering the fishbone (cause and effect) diagram we can develop the following figure.

FIG 1: CONCEPTUAL MODEL: FROM SERVICE QUALITY TO SATISFACTION [EDITED FROM (UDDIN SAJIB MD ET AL., 2011, SHARIFUL ALAM ET AL., 2010)]

Based on the discussion we can test the following null hypothesis:

Hypothesis 1: Empathy has no significant influence on customer satisfaction.

Hypothesis 2: Tangible factor has no significant influence on customer satisfaction.

Hypothesis 3: Reliability factor has no significant influence on customer satisfaction.

Hypothesis 4: Assurance factor has no significant influence on customer satisfaction.

Hypothesis 5: Responsiveness has no significant influence on customer satisfaction.

## LITERATURE REVIEW

Service itself is very complex in nature that is very difficult to articulate. Hotels usually provide service that is very difficult to define. According to Kotler, "A service is any act or performance that one party can offer to another that is essentially intangible and does not result in the ownership of anything. Its production may or may not be tied to a physical product" (Kotler, 2001). So, service can be defined as all those economic activities, which are intangible and involve in close interactions in between service provider and the consumer. Like service its perceived quality is difficult to define and measure. According to Parasuraman et al. service quality is a gap between consumers' expectation and perception of service along the quality dimensions (Parasuraman et al., 1985). Marketing management wants to design strategies that will build profitable relationships with target consumers. But what philosophy should guide these marketing strategies? According to Kotler there are five alternative concepts under which organizations design and carry out their marketing strategies (Kotler and Armstrong, 2012). Product concept which gives importance on quality of goods and services is one of them. So, to build customer relationship service quality has a great impact on consumers' perception about the service.

There is no single universal definition for the service quality (Zineldin, 2006). However, several viewpoints on service quality are shown in table below.

TABLE 1: VIEWPOINTS ON SERVICE QUALITY

Authors	Viewpoints
(Grönroos, 2007)	A result of what consumers receive and how they receive it.
(Lee et al., 2006)	The ability to meet or exceed customer expectations.
(Zineldin, 2006)	The art of doing the right thing, at the right time, in the right way, for the right person and having the best possible results.
(Reid and Bojanic, 2001)	The ability of a service in providing customer satisfaction related to other alternatives
(Evans and Lindsay, 1999)	The total characteristics of service related to its ability to satisfy given needs of customer.
(Bergman and Klefsjö, 1994)	An ability to satisfy the needs and expectations of the customer.
(Cynthia, 1989)	A measure of how well the service level delivered matches customers' expectations on a consistent basis.
(Parasuraman et al., 1984)	A gap between patient's expectation and perception of service along the quality dimensions.
(Berry et al., 1983)	A measure of how well the service level matches customers' expectations.

According to their definitions, the service quality seems to be a disconfirmation paradigm. The outcome of this process might be negative disconfirmation (expectations are higher than perceptions), positive disconfirmation (perceptions are higher than expectations) or confirmation (perceptions are equal to expectations level) (Chisnall, 1979, Surprenant, 1987, Brown and Swartz, 1989, Grönroos, 1990, Parasuraman et al., 1994).

While defining and delivering high-quality service the most important step is to understand what customers expect (Zeithaml et al., 1990, Zeithaml et al., 1996). Expectations are the wants of consumers and their feeling regarding what a service provider should offer. Perceptions refer to the consumers' evaluation of the service and service provider (Parasuraman et al., 1985). In service sector it is a common phenomenon that whether management can correctly perceive customers' need and expectations. It is not exception to hospitality industry. Expectations serve as a major determinant of a consumer's service quality evaluations and satisfaction (O'Connor et al., 2000). So, the "voice of the customer" should be taken into consideration while designing service delivery process. And even after delivering the services, service providers should observe to what extent and how well the customers' expectations have been met. SERVQUAL (Parasuraman et al., 1986) is one of the best models to evaluate customers' expectations and perceptions (Parasuraman et al., 1986).

The basic dimensions to measure service quality are derived from the work of Zeithaml et al. They mentioned SERVQUAL has five major dimensions to measure service quality (Zeithaml et al., 1990). They are tangibles, reliability, responsiveness, assurance, and empathy. Customers evaluate the quality of service by determining whether there is any gap between their expectations and perceptions. SERVQUAL is based on the idea that quality is a subjective customer evaluation, as service is not a physical item, but an experience (Parasuraman et al., 1986, Grönroos, 1990). So, customers' perception is a better measure than other performance measures (Akan, 1995).

It is mentionable that in addition to SERVQUAL, many scholars measured service quality through various quality dimensions. Gourdin (1988), Elliott and Roach (1993), Ostrowski et al. (1993), Truitt and Haynes (1994) are notable in this regard (Gourdin, 1988, Elliott and Roach, 1993, Ostrowski et al., 1993, Truitt and Haynes, 1994). From the previous studies it has been observed that quality dimensions used in evaluating services may vary extensively, but can be classified comprehensively within the SERVQUAL dimensions. Most of the previous studies are constructed on respondents' mean scores, and weighted SERVQUAL points can be perceived as an alternative (Pakdil and Aydn, 2007).

## ANALYSIS

Several data analysis techniques were used. Frequency distributions were obtained to check for data entry errors (e.g. unrecognized or missing codes) and to obtain descriptive statistics. The measures of service quality were factor analyzed: the five factors were extracted (table 2) using varimax rotation; they explained 49.578% of the cumulative variation.

TABLE 2: FACTOR LOADINGS BASED ON PRINCIPAL COMPONENT ANALYSIS					
Items and Factors	Factor 1	Factor 2	Factor 3	Factor 4	Factor 5
<b>Responsibility</b>					
Qe9	.466				
Qe10	.584				
Qe11	.470				
Qe12	.576				
Qe16	.626				
Qe22	.631				
<b>Empathy</b>					
Qe13		.429			
Qe14		.404			
Qe17		.632			
Qe18		.582			
Qe19		.657			
Qe20		.689			
<b>Reliability</b>					
Qe4			.645		
Qe5			.653

	11	3.76	2.90	-0.86	
	12	3.88	3.11	-0.77	
	16	3.92	3.01	-0.91	
	22	4.05	3.13	-0.92	
Assurance	15	3.74	2.97	-0.77	-0.88
	21	4.06	3.07	-0.99	
Empathy	13	3.90	3.19	-0.71	-0.86
	14	3.73	2.87	-0.86	
	17	3.91	3.03	-0.88	
	18	3.73	2.99	-0.74	
	19	3.94	3.08	-0.86	
	20	3.91	2.80	-1.11	
Unweighted Average SERVQUAL score:					-0.86417

Table 3 shows the gap scores for observed variables and average scores for the latent variables that gives us a general idea.

TABLE 4: UNWEIGHTED SERVQUAL SCORES				
SERVICE DIMENSION	Expectation (E)	Perception (P)	SERVQUAL Score (SQ = P-E)	Rank
Tangibles	4.02	3.215	-0.805	5
Reliability	3.94	3.0525	-0.8875	2
Responsiveness	3.915	3.02666667	-0.88833333	1
Assurance	3.9	3.02	-0.88	3
Empathy	3.85333333	2.99333333	-0.86	4
Average	3.92566667	3.0615	-0.86416667	
Overall	19.6283333	15.3075	-4.32083333	

Table 4 shows service dimensions' average expectation, perception and gap score. It also provides ranking on the basis of gap score. But it should be revised on the basis of importance weight that has been shown in the following figure.

TABLE 5: SERVQUAL IMPORTANCE WEIGHTS	
Features	Points
Tangibility	22.29
Reliability	18.37
Responsiveness	21.45
Assurance	13.56
Empathy	24.33
Total:	100

Table 4 and 6 shows the unweighted and weighted SERVQUAL score respectively for each dimension that will be used to explain the relative importance of each components.

TABLE 6: CALCULATION OF WEIGHTED SERVQUAL SCORES				
SERVQUAL Dimension	Unweighted SERVQUAL Score (SQ = P-E)	Importance Weight	Weighted SERVQUAL Score	Rank
Tangibles	-0.805	22.29	-17.94345	3
Reliability	-0.8875	18.37	-16.303375	4
Responsiveness	-0.88833333	21.45	-19.05474993	2
Assurance	-0.88	13.56	-11.9328	5
Empathy	-0.86	24.33	-20.9238	1
Overall	-4.32083333	100	-86.15817493	
Average Weighted score:			-28.71939164	

Unlike table 4 this table above provides us the ranking of the importance of service dimensions on the basis of weighted gap score that sounds more reliable.

## REGRESSION ANALYSIS

TABLE 7: MODEL SUMMARY <sup>b</sup>					
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	Durbin-Watson
1	.620 <sup>a</sup>	.385	.369	.665	1.628
a. Predictors: (Constant), Responsiveness, Assurance, Reliability, Tangibles, Empathy					
b. Dependent Variable: overall satisfaction					

The acceptable Durbin–Watson range is between 1.5 and 2.5. In this analysis Durbin – Watson value is 1.628, which is between the acceptable ranges, show that there were no auto correlation problems in the data used in this research. Thus, the measures selected for assessing independent variables in this study do not reach levels of multicollinearity.

TABLE 8: COEFFICIENTS <sup>a</sup>						
Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	3.254	.047		68.665	.000
	Empathy	.279	.048	.334	5.879	.000
	Tangibles	.265	.048	.316	5.576	.000
	Reliability	.255	.048	.304	5.364	.000
	Assurance	.081	.048	.097	1.706	.090
	Responsiveness	.223	.048	.267	4.698	.000
a. Dependent Variable: overall satisfaction						

## FINDINGS AND DISCUSSION

Out of 279 questionnaires 236 have been returned. Finally 197 questionnaires have been selected for analysis after rejecting the incomplete questionnaires. 39 questionnaires were rejected, because the respondents did not provide enough information or they provided inconsistent information.

## SERVQUAL SCORES

The initial findings indicate the Responsiveness dimension has the greatest service gap of –0.89 followed by the Reliability dimension at –0.88. The smallest service gap was the Tangible dimension at –0.81. However, it was inaccurate to draw conclusions from this directly since the SERVQUAL scores did not take into consideration the importance of each service dimension. So, the weighted SERVQUAL scores are computed.

To have a weighted score, we have to calculate the importance weights for each of the five dimensions of service quality constituting the SERVQUAL scale. The sum of the weights should add up to 100. Then we can calculate the weighted average SERVQUAL score for each of the five dimensions of service quality multiplying the averages calculated in previous step above by the weighted scores.

The weighted SERVQUAL scores are more negative than the un-weighted SERVQUAL scores. The largest gap amongst the rankings is Empathy at –20.92, followed by Responsiveness, Tangibles and Reliability respectively.

## RELATIONSHIP BETWEEN OVERALL SATISFACTION LEVEL FOR 5 DIMENSIONS REGARDING OVERALL SATISFACTION TOWARDS THE HOTEL SERVICE

Regression analysis was run to evaluate the overall satisfaction levels for each of the 5 dimensions (Reliability, Assurance, Tangibles, Empathy and Responsiveness) in comparison with perception of the overall satisfaction level.

Along with SERVQUAL the data are analyzed by means of an Exploratory Factor Analysis (EFA), implemented in the form of Principal Components Analysis that is also evident in the previous research (Johnson and Wichern, 1992, Härdle and Simar, 2012). Regression of the resultant factor scores (Pedhazur and Schmelkin, 1991) (also evident in the previous research work) against some overall criterion measure e.g. overall satisfaction gives an indication of the relative importance of the different factors (MacLean and Gray, 1998).

Regression of the individual factor scores against overall satisfaction yields the result that all the factors except assurance have significance levels lower than 5%, which indicate their significant influence on the level of overall satisfaction. A model with an equation of overall satisfaction level towards hotel service = 3.254 + 0.279(Overall satisfaction level in Empathy) + 0.255(Overall satisfaction level in Tangibles) + 0.255(Overall satisfaction level in Reliability) + 0.081(Overall satisfaction level in Assurance) + 0.223(Overall satisfaction level in Responsiveness) +  $\epsilon$  explains 38.5% ( $R^2$ ) of the variability in the overall satisfaction level (See Appendix). As expected  $R^2$  is a positive value here. It can be negative also. Negative values of  $R^2$  may occur when fitting non-linear trends to data (Colin Cameron and Windmeijer, 1997) that is not the case here. However, based on the regression analysis we can say that an  $R^2$  near 0.4 would get us interested and impressed at this model's explanatory power. Except hypothesis 4 we can reject the remaining null hypothesis that indicates four out of five latent variables have significant impact on customer satisfaction.

The finding shows that improving on the satisfaction level in tangibles, responsiveness, reliability and empathy leads to improving the overall satisfaction level. And when customers are satisfied it is easy to build relationship with them. In other word we can say that it will facilitate customer relationship management.

## LIMITATIONS &amp; FURTHER RESEARCH

This research study focused on latent variables based on SERVQUAL model in one of the sectors of hospitality industry. In other sectors SERVPERF might give better result though there are controversies regarding SURVPERF superiority over SERVQUAL (McAlexander et al., 1994). The result would have more authenticity if we could increase the sample size. The model can be modified by identifying some other latent factors. In future customer retention can be measured based on the extension of the current model.

## RECOMMENDATIONS AND CONCLUSION

In this paper we have seen the latent variable quality as the cause of satisfaction though occasionally researchers have used quality and satisfaction interchangeably (Gallo et al., 2003, Rhoden, 2003). Even some researchers have suggested that customer satisfaction is an antecedent factor of service quality (Filiatrault and Ritchie, 1988). However our research model indicates that this may not be the case and provides the empirical support for the notion that service quality in fact leads to customer satisfaction and furthermore, an increase in customer retention. It also supports some previous research results (Park and Baek, 2007, Cronin Jr and Taylor, 1992, Keaveney and Parthasarathy, 2001).

As it is known to us that satisfied customers are easy to manage and they work as a channel to make new customers, authority should be well concerned about providing facilities to customers based on the factors that are identified by the SERVQUAL model. Thus ensuring the service quality by improving the perceived quality can lead to sound customer relationship marketing. If the SERVQUAL model is applied in this sector or in some other relevant sectors then service quality as well as customer satisfaction can be measured to some extent that must be helpful in applying customer relationship marketing.

## **REQUEST FOR FEEDBACK**

**Dear Readers**

At the very outset, International Journal of Research in Commerce and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail i.e. **infoijrcm@gmail.com** for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com).

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

**Academically yours**

Sd/-

**Co-ordinator**

## ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
