CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Management Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email address: infoijrcm@gmail.com.

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR
IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript entitled ' _____ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

NAME OF CORRESPONDING AUTHOR:

Designation:

Affiliation with full address, contact numbers & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

NOTES:

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:
New Manuscript for Review in the area of (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers**, and **email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

INTRODUCTION**REVIEW OF LITERATURE****NEED/IMPORTANCE OF THE STUDY****STATEMENT OF THE PROBLEM****OBJECTIVES****HYPOTHESES****RESEARCH METHODOLOGY****RESULTS & DISCUSSION****FINDINGS****RECOMMENDATIONS/SUGGESTIONS****CONCLUSIONS****SCOPE FOR FURTHER RESEARCH****ACKNOWLEDGMENTS****REFERENCES****APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use **(ed.)** for one editor, and **(ed.s)** for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - The location of endnotes within the text should be indicated by superscript numbers.

PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:**BOOKS**

- Bowersox, Donald J., Closs, David J., (1996), "Logistical Management." Tata McGraw, Hill, New Delhi.

ABSTRACT

The growth of internet is phenomenal. However the growth of e-commerce and online business activities are low compared to other activities such as increasing the speed, email, chat, surfing, etc. The main reason behind the low online e-commerce & business activities is the lack of online security and trust. People in the country like India are afraid to transfer their personal data online because of lack of security and trust on the web site. There is no perfect automated model available where one can review the trustworthiness of web sites based on contents. Through this paper, researchers have tried to fill the gap by proposing a model which analyses the web site contents and generate accuracy level of web site trustworthiness.

KEYWORDS

Trustability, Web Content Mining, Web Trust.

INTRODUCTION

Internet is a giant network which connects world through computers. The Internet was introduced by ARPANET in 1969 [9]. The use of the internet has increased in structure and usages. Total growth of the internet usage from year 2000 to 2010 is 1520 %. [9] Internet usage is increased but no change in information trustworthiness is observed. Research communities continue to work on web trust including user online security, integrity and trustworthiness of web content [8]. Trustworthiness is more than merely an important attribute of a website.

This paper proposes an effective web content trust assessment model (WCTAM) for evaluation of web sites for its trust ability using web mining techniques. Web mining is an application of data mining. Web mining is a technique to extract knowledge from web data. Web mining has three categories like Web content mining, Web structure mining and Web usage mining. Using Web content mining extracts and integrates useful data, information and knowledge from web page contents. An effective trust assessment tool must be able to correctly identify and determine the trustworthiness level of sites. Web site contents, such as text and other meta-data are analyzed using Web content mining then after assessment techniques are applied on that data. After that, WCTAM will classify the web site according to its contents in three categories like high trust worthy, mid trust worthy and low trust worthy.

RELATED WORK**MODEL OF TRUST IN ECOMMERCE**

Florian N. Egger developed a model of trust in eCommerce which is known as MoTEC (model of trust in eCommerce) which classifies the characteristics of trust in e-commerce in terms of company, security policy, product, usability, policy, return policy, and warranty policy. [8]

THIRD PARTY REGULATION

In any web site the online trade communities' is self regulated. Such self-regulation increases the growth of trust among consumers. By participation in status-based scheme which provides a seal (i.e. proving trustmarks or log). Once the web site satisfies minimum trust criteria, seal is provided. In website any violation done then the seal is withdraw.

There are two most popular trust label programs such as:

- TRUSTe (www.trust.org)
- BBBOnline (www.bbbonline.org).

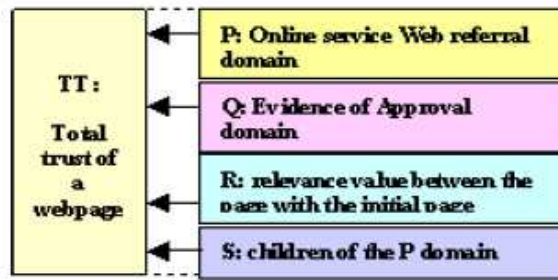

TRUSTe organization mission is to build trust in the Internet by promoting principal of disclosure. TRUSTe organization is non-profitable organization. Privacy is main trust criteria in TRUSTe system. If any online organization requests, TRUSTe checks the organization's web site.[3]. If web site establishes privacy principles, meets the core criteria and is willing to fulfill with oversight the consumer resolutions procedures, the TRUSTe seal can be provided to the website. Similarly, the BBBOnline Privacy program offers a 'seal' to websites which post online privacy policies and meet the principles of the Better Business Bureau (disclosure, choice and security). It also monitors compliance and applies specific sanctions for non-compliance [4]. Trust label programs require vigilance in their monitoring to ensure whether the privacy standards are upheld. However, a recent survey shows that people do not seem to understand privacy seal programs [1].

W3 TRUST MODEL

W3 Trust model (W3TM) approach is to utilize a metadata mechanism to extract hidden trust information from web documents and other sources to enable trust assessments. Based on the result of trust assessments, Web users can be made informed about business decisions. Hence, user confidence can be enhanced. Figure 1 shows how W3TM calculates the trust weight.

W3TM use three categories like Category A (Service Information), Category B (Reputation, legal requirement) and Category C (Digital certificate information) for calculation of TT. [11]

FIGURE 1: W3TM: TRUST WEIGHT ASSESSMENT CALCULATION

Formal Trust calculation base on

$$TT = \frac{P+Q+S}{3}$$

The main disadvantage of this approach is that W3TM is only prototype not implementation tool and W3TM uses only meta-data.

PROPOSED APPROACH

From the above discussion it is clear that existing models work on policy statements and seal programs to validate trust on web site. But there is no proper model which will validate the trust based on the contents of web site. Our model WCTAM validates the web site for trust worthiness based on the contents. WCTAM is used to collect information from web source and then information repository is prepared. Then we apply the content processing and generate score. Here, automated classified techniques are used for trust evaluations. Figure 3 shows the steps of WCTAM.

INFORMATION COLLECTION

Web information study has its root in information retrieval (IR). For such study it requires large collection of information from web documents. Traditional IR assumes that the basic information unit is document or a large collection of documents is available to form text data base [6]. For web, the large collection of documents is web pages. As a result, we can use web crawler for collection of information. Web crawlers are used to prepare information repository.

CONTENT PROCESSING

The web page data are unstructured so, it requires preprocessing. Techniques like content processing are used for data preprocessing. Figure 2 shows the steps of content processing.

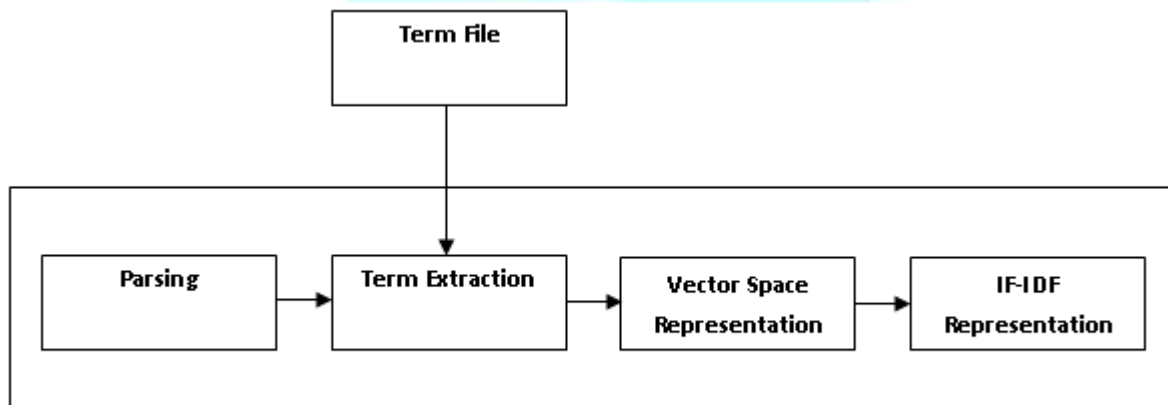

In Figure 2, Parsing means (I) to remove noisy information like HTML tags such as font, table, heading etc., (II) stop word removal process (III) tokenization of documents.

After parsing, the process for extraction of term is applied on clean documents and the data are represented in vector space model.

The term frequency (TF) approach is used to normalize the document length. For each term t_i and each document d_j , the $TF(t_i, d_j)$ measure is computed. For calculation of TF we can use the techniques like Sum of terms counts overall term, Maximum of term count over all terms in document and Log scale condition the term count.[6,7] technique because the complexity of this approach is $O(\log n)$.

$$TF(t_i, d_j) = \begin{cases} 0 & \text{if } n_{ij} = 0 \\ 1 + \log(1 + \log n_{ij}) & \text{if } n_{ij} > 0 \end{cases}$$

FIGURE 2: CONTENT PROCESSING

$$TF(t_i, d_j) = \begin{cases} 0 & \text{if } n_{ij} = 0 \\ 1 + \log(1 + \log n_{ij}) & \text{if } n_{ij} > 0 \end{cases}$$

The basic idea of the inverse document frequency (IDF) approach is to scale down the coordinates for some axes, corresponding to terms occurring in many documents. So, according to their occurrences we can assign the weight to each term.[6,7]

$$IDF(t_i) = \log \frac{1 + |D|}{|D_{t_i}|}$$

In the TFIDF representation each coordinate of the document vector is computed as a product of its TF and IDF components [6].

$$d_j^i = TF(t_i, d_j) IDF(t_i)$$

The basic idea of the Inverse Document Frequency (IDF) approach is to scale down the coordinates for some axes, corresponding to terms occurring in many documents. In such case, if IDF value is minimum, it indicates that it occurs frequently. According to the occurrence of number of documents (Nod), the weight (W_i) is assigned to each term.

SCORE GENERATION

After calculating the weight of each document (W_i), Total of Trust Document (TTD) is calculated. We can apply the classification techniques for assessment of each document based on TTD value. TTD value can be calculated by following equation

$$TTD = \sum_{i=0}^{i=n} W_i * T_i$$

T_i indicates each term of document. W_i indicates weight of each term of document.

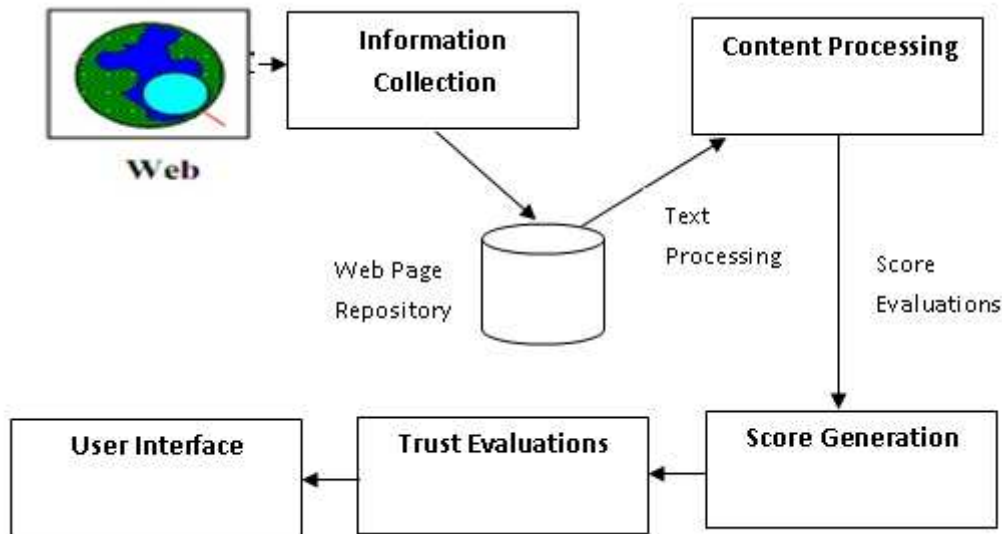

TRUST EVALUATION

After calculation of TTD value, web documents are automatically classified into high trust, mid trust and low trust categories. For this categorization supervised techniques like classification is used. First the model will be trained by training data and then test data will be applied on the model to assess the accuracy of the model. It will generate the confusion matrix. Based on the confusion matrix we can derive precision, recall, F-Score and accuracy level. Confusion matrix can be generated by various supervised machine learning algorithms like Naïve Bayesian, Support Vector Machines and K-Nearest Neighbor to major the accuracy level [5]. This accuracy level is used to improve the website content credential.

EXPERIMENTAL SETUP

A C#.Net program is used in this model for content processing and score generation. It will generate classified document data in excel file that will be used by Weka machine learning algorithm [10] for evolution of classification accuracy.

FIGURE 3: WEB CONTENT TRUST ASSESSMENT MODEL (WCTAM)

CONCLUSION AND FUTURE WORK

The WCTAM aims to verify the trustworthiness and credibility of web sites in terms of its contents. This will help to improve the contents of web site. This model is also helpful to check whether the contents of site are highly trustable, low trustable or semi trustable. This model allows user to major trust percentage based on its contents and advice to improve the contents of web sites. In future such model can be used in any e-commerce site and other sites to measure the trustworthiness of such sites.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Computer Application and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail infoijrcm@gmail.com for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail infoijrcm@gmail.com.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-

Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
