## CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the areas of Computer Science & Applications; Commerce; Business; Finance; Marketing; Human Resource Management; General Management; Banking; Economics; Tourism Administration & Management; Education; Law; Library & Information Science; Defence & Strategic Studies; Electronic Science; Corporate Governance; Industrial Relations; and emerging paradigms in allied subjects like Accounting; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Rural Economics; Co-operation; Demography; Development Planning; Development Studies; Applied Economics; Development Economics; Business Economics; Monetary Policy; Public Policy Economics; Real Estate; Regional Economics; Political Science; Continuing Education; Labour Welfare; Philosophy; Psychology; Sociology; Tax Accounting; Advertising & Promotion Management; Management Information Systems (MIS); Business Law; Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labour Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; International Relations; Human Rights & Duties; Public Administration; Population Studies; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism & Hospitality; Transportation Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic; Web Design and emerging paradigms in allied subjects.

Anybody can submit the **soft copy** of unpublished novel; original; empirical and high quality **research work/manuscript anytime** in ***M.S. Word format*** after preparing the same as per our **GUIDELINES FOR SUBMISSION**; at our email address i.e. [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com) or online by clicking the link **online submission** as given on our website ([FOR ONLINE SUBMISSION, CLICK HERE](#)).

## GUIDELINES FOR SUBMISSION OF MANUSCRIPT

### 1. **COVERING LETTER FOR SUBMISSION:**

DATED: \_\_\_\_\_

**THE EDITOR**  
IJRCM

**Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF**

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

**DEAR SIR/MADAM**

Please find my submission of manuscript entitled '\_\_\_\_\_ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

#### **NAME OF CORRESPONDING AUTHOR:**

Designation:  
Affiliation with full address, contact numbers & Pin Code:  
Residential address with Pin Code:  
Mobile Number (s):  
Landline Number (s):  
E-mail Address:  
Alternate E-mail Address:

#### **NOTES:**

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:  
**New Manuscript for Review in the area of** (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers, and email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

**INTRODUCTION****REVIEW OF LITERATURE****NEED/IMPORTANCE OF THE STUDY****STATEMENT OF THE PROBLEM****OBJECTIVES****HYPOTHESES****RESEARCH METHODOLOGY****RESULTS & DISCUSSION****FINDINGS****RECOMMENDATIONS/SUGGESTIONS****CONCLUSIONS****SCOPE FOR FURTHER RESEARCH****ACKNOWLEDGMENTS****REFERENCES****APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
  - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
  - Use (ed.) for one editor, and (ed.s) for multiple editors.
  - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
  - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
  - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
  - For titles in a language other than English, provide an English translation in parentheses.
  - The location of endnotes within the text should be indicated by superscript numbers.

**PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:****BOOKS**

### ABSTRACT

*Distribution Generation capacity and Network Expansion planning is a basic part of power network planning that determines where, when and how many new transmission should be added to the network. Distribution generation capacity is required for adequate performance of a distribution system. In this paper we present the reasons for studying Artificial intelligence (AI) and Neural networks (NN) for which they have used for distributed generation capacity and network expansion planning. Here will take intelligent streets of AI and NN where street lights will switch on and switch off according to the sunlight heat and rays with the help of various sensors and learning algorithms to implement this system. Sensors detect the temperature of heat and rays within each street of the premises. Back propagation algorithm is used to train the data samples in the knowledge database and check whether hidden layers or synaptic weights are giving exact output for inputs. Based on Monte Carlo simulation and Mat lab tool, a methodology has been developed to evaluate the switch on and switch off lights. Acquiring an input from sensors such as temperature, sun rays as inputs and matching with weights available in existing database or memory chip, for matching we are using pattern matching algorithm.*

### KEYWORDS

Artificial Intelligence, pattern matching, neural networks, sensors, Back propagation algorithm, Monte Carlo simulation.

### 1. INTRODUCTION

Transmission network expansion planning and distributed generation is an important component of power system planning. Lights will be switch on and switch off according to the sunlight heat and rays. Heat and rays is read or observed by an input sensing device such as temperature sensors and light sensors. It sense or detect the temperature and light in the premises of the street poles. Light is measured through a photo resistive device (ORP 12) connected to a simple amplifier for level adjustment and impedance reduction through light sensors [5]. Temperature is measured through a heat system in OC through temperature sensors. For every random DG street sub stations we are using Automatic microprocessor control (AMC) carries out functions in a reactive way i.e. it responds to environmental conditions. The behavior of the AMC is controlled by a set of rules, but the way that rules are applied can be modified by high level commands. Lighting the streets without the help of manpower. So that we can switch on and off the lights according to the sun rise and sun set. By the method we can save power, time and cost. If person is not in time to switch on and switch off. This system will automatically on the light and off also.

### 2. BACK PROPAGATION ALGORITHM

Light switch on and off has been using sensor inputs to train a neural network via Back propagation [2]. A typical neural network has N inputs and one or more output as shown in Fig 1. The input layer is composed not of full neurons, but rather consists simply of the values in a data record, that constitutes inputs to the next layer of neurons. The next layer is called a hidden layer and there may be several hidden layers. The final layer is the output layer, where there is one node for each class. A single sweep forward through the network results in the assignment of a value to each output node and the record is assigned to which ever class node had the highest value. These actual inputs are fed into the network as the inputs. This approach works great when trying to detect or sense the input in the form of temperature or light with fixed orientation and scale. However at different scale and orientation, it doesn't give encouraging results. Therefore tokens of an input used during training, the network are trained; it identifies the input pattern and tries to output the associated output pattern. It must calculate how the error changes as each weight is increased or decreased slightly. The back propagation algorithm is the most widely used method for determining the EW. The power of neural networks is realized when a pattern of inputs, during testing, is given as an input and it identifies the matching pattern it has already trained in memory.

### 3. SENSORS

A sensor is a converter that measures a physical quantity and converts it into a signal which can be read by an observer or by an instrument. A thermocouple converts temperature to an output voltage which can be read by a voltmeter. In this paper we are using temperature sensor premises are measured by the system. Clearly they each have value in providing information for a control system but they also provide valuable contextual information for learning. Temperature is available to the system in °C. The central heating control has direct control of the central heating system. Control is made through a simple solid state device. The system is therefore able to make different sorts of control options available, other than simple temperature of time based control. Electricity sensor is senses the amount of electricity used by the streets or premises (in watts) is made available to the system every few seconds. This sensor is implemented by employing a current transformer on the main electricity feed that has a fixed low resistance stable resistor as its load. The voltage across this load is available to the system via a simple amplifier used for level adjustment. The value available is adjusted to a reading in watts through the use of constant. The system is able to detect the effect of some of its control operations using this measurement. Light sensor the light is measured in the streets or premises. The system uses constants to infer the light levels in different places. Ideally, each street has its own light level sensor. Light is measured through a photo resistive device (ORP12) connected to a simple amplifier for level adjustment and impedance reduction. This has been no attempt to recognized units of light level as an output. The sensor simple supplies a reading between 0 and 255 that is indicative of the ambient level. Automatic microprocessor controller (AMC) carries out functions in a reactive way. i.e. it responds to environmental conditions. The behavior of the AMC is controlled by a set of rules, but the way that rules are applied can be modified by high level commands. Lamps the system is allowed to have direct control over several lamps in the premises or streets. Other than in an emergency, the system is the only controller of these lamps. It was felt that some lamps would be unsuitable for system control because of the weather conditions may want light on or off at times. Lamps in areas control is made through simple solid state devices.

### 4. PROPOSED SCHEME

Block diagram of street lamps with sensors, microprocessor controller, lamps, and power lines of wires. In this fig.2 we are using sensors to detect or read an input from sun. By reading an input the sensors will get an activate according to the situation if it is sunrise the lamps will get switch off. If it is sunset lamps will switch on. In sunrise temperature, heat, light will increase at certain level sensors will detect or observe the premises or streets then the electricity will play a key role to inform to AMC with an exact input. This input will learn with back propagation to get exact output from trained samples. Then the pattern checker or matcher will give as input for Automatic Microprocessor controller (AMC) whether lamp should switch off or switch on.

#### PERFORMANCE EVALUATION

**Step 1:** Observe an input from sun through light sensor or central heating controller, temperature sensor for switch off or switch on the street lamps.

**Step 2:** Electricity sensor will take an input from above level sensors whether electricity should be flow or not to below levels.

**Step 3:** Once the Inputs are passed from step1, step2 to back propagation algorithm it will calculate the input with already trained weight samples to get exact output. If any error in the output these algorithm will recalculate or adjust the trained weights to optimize or minimize the error by giving new weights to system (AMC).

Initialize the weights in the network or sensors (often randomly)

Do

For each example 'e' in the training set

O= neural-net-output (network or sensors, e);

Forward pass

T= teacher output for e

Calculate error (T-O) at the output units

Compute delta\_Wh for all weights from hidden layer

to output layer; backward pass

Compute delta\_Wi for all weights from input layer to hidden layer; backward pass continued

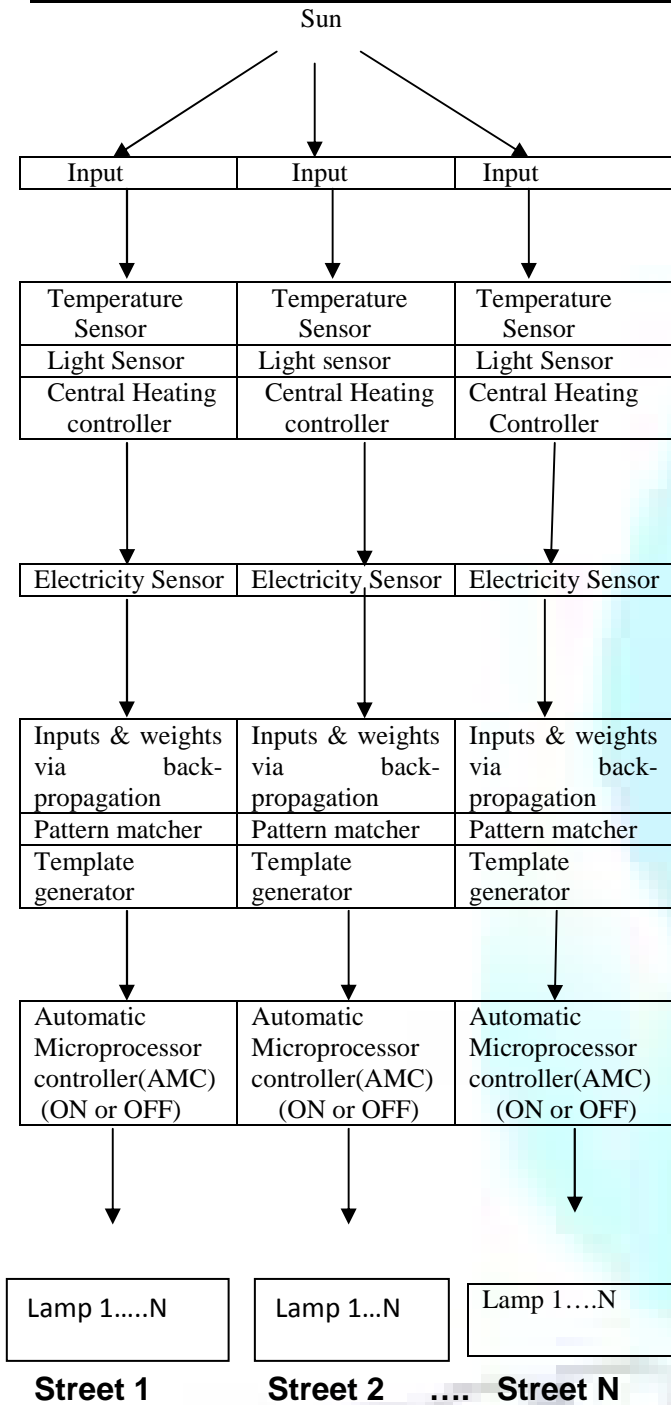

Update the weights in the network or sensors until all examples classified correctly or stopping criterion satisfied

Return the Network or Sensors

**Step 4:** Pattern matcher or checker will give an input from Back propagation after matching to AMC to switch on or off the lamps in the streets.

WORLD

**5. TESTING AND RESULTS**

Using Monte Carlo simulation model on AI and NN has been considered. The sensors signals input street each substation has been assumed as uniform, as given below:

$$F(S1) = 1/1.3 \quad 0.5 < S1 < 1.8$$

$$F(S2) = 1/1.3 \quad 0.5 < S2 < 1.8$$

Three DG street substations have been considered in this paper to switch off or on the lamps according to the temperature sensor, light sensor, central heating controller in table 1.

**TABLE 1: WEIGHTS OF TRAINED BACK PROPAGATION ALGORITHM FOR REPRESENTING SWITCH ON AND OFF**

S.I No (i)	1	2	3
$W_i$	-6.392978	0.288482	-0.288075
$\Delta W_i$	4.000000	-2.773707	5.022678

Initially, the back propagation algorithm was trained with n=3 neurons in the hidden layer. The weights  $W_1$ - $W_3$  and  $\Delta W_1$ - $\Delta W_3$  of the ANN are given in table 1.

TABLE 2: VALIDATION OF TRAINED BACK PROPAGATION ALGORITHM

S.I No	Sun input	TIME (%)		
		Obtained from Light sensor ( $t_g$ )	Obtained From Light sensor ( $t_g$ )	Error (%) ( $(t_g - t_a) \times 100 / t_g$ )
1	0.50	1.00000	1.001279	-0.127
2	0.60	0.88330	0.872775	1.191
3	0.65	0.83350	0.822148	1.362

$$S_{1,i} = 1.3 N_1 + 0.5$$

$$S_{2,i} = 0.3 N_2 + 0.2$$

To represent the status of each DG; 4 random digits  $N_3$  and  $N_4$  were used and the status was decided based on the following:

$0 < N_3 < 0.78$  DG-1 street is in ON (N) state

$0.78 < N_3 < 1.0$  DG-1 street is in OFF (F) state

$0 < N_4 < 0.81$  DG-2 street is in ON (N) state

$0.81 < N_4 < 1.0$  DG-2 street is in OFF (F) state

For each sample, the DG is calculated streets. Status of the states will change according to input.

## 7. CONCLUSION

It is very challenging task for AMC to switch on or off the lamps according to the environmental conditions. Although Existed systems are running by solar systems for switch on or off for street lamps. In our proposed scheme running with flow of Electricity and sensors, controllers. It is difficult to implement this system. Still there is a possible where we can implement this kind of system. Because all over the world we are using complete electronic devices and advance technology methods. In this scheme going with Back propagation algorithm were you can easily solve errors in this system by adjusting weights or updating weights from trained samples to get exact output. Major purpose of this paper In South Asian countries the electricity is a major problem by this research idea at least minimizing the wastage of power in the street lamps depending upon human power. The person should come to switch on and switch off the lamps on time (morning and evening) he have to cover enter streets in mean time. Cost factor will play a key role in this research idea.

## **REQUEST FOR FEEDBACK**

**Dear Readers**

At the very outset, International Journal of Research in Computer Application & Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com) for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com).

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

**Academically yours**

Sd/-  
**Co-ordinator**

Neither the Journal nor its publishers/Editors/Editorial Board nor anyone else involved in creating, producing or delivering the journal or the materials contained therein, assumes any liability or responsibility for the accuracy, completeness, or usefulness of any information provided in the journal, nor shall they be liable for any direct, indirect, incidental, special, consequential or punitive damages arising out of the use of information/material contained in the journal. The journal, nor its publishers/Editors/Editorial Board, nor any other party involved in the preparation of material contained in the journal represents or warrants that the information contained herein is in every respect accurate or complete, and they are not responsible for any errors or omissions or for the results obtained from the use of such material. Readers are encouraged to confirm the information contained herein with other sources. The responsibility of the contents and the opinions expressed in this journal is exclusively of the author (s) concerned.

## ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
