CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the areas of Computer Science & Applications; Commerce; Business; Finance; Marketing; Human Resource Management; General Management; Banking; Economics; Tourism Administration & Management; Education; Law; Library & Information Science; Defence & Strategic Studies; Electronic Science; Corporate Governance; Industrial Relations; and emerging paradigms in allied subjects like Accounting; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Rural Economics; Co-operation; Demography; Development Planning; Development Studies; Applied Economics; Development Economics; Business Economics; Monetary Policy; Public Policy Economics; Real Estate; Regional Economics; Political Science; Continuing Education; Labour Welfare; Philosophy; Psychology; Sociology; Tax Accounting; Advertising & Promotion Management; Management Information Systems (MIS); Business Law; Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labour Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; International Relations; Human Rights & Duties; Public Administration; Population Studies; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism & Hospitality; Transportation Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic; Web Design and emerging paradigms in allied subjects.

Anybody can submit the **soft copy** of unpublished novel; original; empirical and high quality **research work/manuscript anytime** in ***M.S. Word format*** after preparing the same as per our **GUIDELINES FOR SUBMISSION**; at our email address i.e. infoijrcm@gmail.com or online by clicking the link **online submission** as given on our website ([FOR ONLINE SUBMISSION, CLICK HERE](#)).

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR
IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF.

(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript entitled ' _____ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

NAME OF CORRESPONDING AUTHOR:

Designation:
Affiliation with full address, contact numbers & Pin Code:
Residential address with Pin Code:
Mobile Number (s):
Landline Number (s):
E-mail Address:
Alternate E-mail Address:

NOTES:

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:
New Manuscript for Review in the area of (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers, and email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

INTRODUCTION**REVIEW OF LITERATURE****NEED/IMPORTANCE OF THE STUDY****STATEMENT OF THE PROBLEM****OBJECTIVES****HYPOTHESES****RESEARCH METHODOLOGY****RESULTS & DISCUSSION****FINDINGS****RECOMMENDATIONS/SUGGESTIONS****CONCLUSIONS****SCOPE FOR FURTHER RESEARCH****ACKNOWLEDGMENTS****REFERENCES****APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use (ed.) for one editor, and (ed.s) for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - The location of endnotes within the text should be indicated by superscript numbers.

PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:**BOOKS**

- Bowersox, Donald J., Closs, David J., (1996), "Logistical Management." Tata McGraw, Hill, New Delhi.

CREATING AN OPTIMAL PORTFOLIO ON S&P BSE SENSEX USING SHARPE'S SINGLE INDEX MODEL

HETAL D. TANDEL

ASST. PROFESSOR

NARAN LALA COLLEGE OF COMMERCE & MANAGEMENT

NAVSARI

ABSTRACT

This is an attempt to construct an optimal portfolio consisting of securities of S&P BSE SENSEX using Sharpe Single index model. Taking S&P BSE SENSEX as market performance index and considering daily indices along with the daily prices of 30 securities of the S&P BSE SENSEX for the period of April 2008 to March 2013, variance of the market index and variance, beta, systematic risk and unsystematic risk of each security is calculated. In arriving at optimal portfolio, the emphasis of Sharpe model is on Beta and on the Market Index. The securities are selected on the basis of unique cut-off rate. The optimal portfolio consists of those securities whose excess return to beta ratio is greater than the cut-off rate. Once the choice of securities is made, the proportion of investment in each of the selected securities is computed on the basis of beta value, unsystematic risk, excess return to beta ratio and cut-off rate of each of the securities concerned. The study finds that optimal portfolio consists of securities of nine companies namely Dr Reddy's Lab ,Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, and ITC with maximum suggested investment in Dr Reddy's Lab followed by Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, and ITC respectively.

KEYWORDS

Beta, Market variance, Residual variance, Optimal portfolio, Single index model.

JEL CLASSIFICATION

G11

INTRODUCTION

The objective of every rational investor is to maximize his return and minimise the risk. Portfolio is the combination of sets of assets of financial nature. Securities carry different degrees of expected risk. Most investor hope that if they hold several assets, even if one goes bad, the others will provide some protection from an extreme loss. By constructing a portfolio, investors attempt to spread risk by not putting all eggs into one basket. The goal of portfolio construction would be to generate a portfolio that provides the highest return at a given level of risk or lowest risk for a given level of return. Such a portfolio would be known as the optimal portfolio .It is an efficient portfolio most preferred by an investor because its risk/reward characteristics approximate the investor's utility function.

Markowitz model had serious practical limitation due to the rigours involved in compiling the expected returns, standard deviation, variance, co-variance of each security to every other security in the portfolio. Sharpe model has simplified this process by relating the return in a security to a single market index.

OBJECTIVES OF THE STUDY

The objectives of the study are as follows:

1. To construct an optimal portfolio using Sharpe's Single Index Model i.e. to find out the type of scrips on S&P BSE SENSEX in which investment is to be made and to find out the proportion to be invested in a particular selected scrip in the portfolio.
2. To find out the scrips that gives the maximum reward to risk in comparison to other scrips.
3. To guide investors to find out the company that gives the maximum return with minimum risk.

DATA AND METHODOLOGY

The data taken for the study is secondary in nature. For this purpose S&P BSE SENSEX is taken as the market performance index. The data has been collected from the official website of Bombay Stock Exchange (BSE), namely www.bseindia.com. The study is conducted with the price data of 30 scrips of S&P BSE SENSEX for the past five years from April 2008 to March 2013. For determining daily return of S&P BSE SENSEX, daily indices data for the period of April 2008 to March 2013 are taken into consideration. Similarly for determining the daily return of 30 securities of S&P BSE SENSEX, daily prices of each security for the period of April 2008 to March 2013 are taken into consideration. On the basis of computed return, variance of market index, variance of each security, beta (β) value , systematic risk and unsystematic risk of each security is calculated. Ranking of the stocks are done on the basis of their excess return to beta ratio from highest to lowest. The cut off rate (C_i) for each security is also calculated. Those securities whose 'Excess Return-to-Beta Ratio' is greater than the cut off rate are selected. Then to arrive at the optimal portfolio, the proportion of investment in each of the selected securities in the optimal portfolio is computed on the basis of beta value, unsystematic risk, excess return to beta ratio and cut-off rate of each of the securities concerned. Different Statistical and financial tools and techniques, and charts have been used for the purpose of analysis and interpretation of data.

1) RETURN

The daily return on each of the selected stocks is calculated with the following formula.

$$R_{it} = \frac{P_{it} - P_{it-1}}{P_{it-1}}$$

Where,

P_{it} , P_{it-1} are the share price at time t and t-1 for security.

2) RISK

The essence of risk in investment is the variation in its returns. The total variability in returns of a security represents the total risk of that security. Systematic risk and unsystematic risk are the two components of total risk.

The variance of securities has two components namely, systematic risk and unsystematic risk or unique risk. According to Sharpe, the variance explained by the market index is referred to as systematic risk. The unexplained variance is called residual variance or unsystematic risk. It follows:

Total risk of a security = Systematic risk + unsystematic risk

$$\text{Systematic Risk} = \beta^2 \times (\text{Variance of index})$$

$$\text{Systematic Risk} = \beta_i^2 \times \sigma_m^2$$

$$\text{Unsystematic Risk} = \text{Total variance} - \text{Systematic risk}$$

$$\sigma_{ei}^2 = \sigma_i^2 - \text{systematic risk}$$

Thus, the total risk = systematic risk + unsystematic risk

$$= \beta_i^2 \times \sigma_m^2 + \sigma_{ei}^2$$

From this, the portfolio variance can be derived.

$$\sigma_p^2 = \left[\left(\sum_{i=1}^N X_i \beta_i \right)^2 \times \sigma_m^2 \right] + \left[\sum_{i=1}^N X_i^2 \sigma_{ei}^2 \right]$$

Where,

$$\sigma_p^2 = \text{Variance of portfolio}$$

$$\sigma_m^2 = \text{Expected variance of index}$$

$$\sigma_{ei}^2 = \text{Variation in security's return not related to the market index.}$$

$$X_i = \text{Proportion of stock 'i' in the portfolio.}$$

3) SHARPE'S OPTIMAL PORTFOLIO

The optimal portfolio selection technique used by Sharpe is called 'Single Index Model'. As per this model the desirability of a stock to be included in optimal portfolio is directly related to its excess return to beta ratio:

$$(R_i - R_f) / \beta_i$$

Where,

$$R_i = \text{Expected return on stock i}$$

$$R_f = \text{Return on risk free asset}$$

$$\beta_i = \text{Percentage change in the rate of return on stock i associated with one unit change in the market return.}$$

The excess return is the difference between the expected return on the stock and the risk less rate of interest such as the rate offered on the governmental securities or treasury bills. The excess return to beta ratio measures the additional return on a security per unit of systematic risk or non-diversified risk. This ratio provides a relationship between potential risk and reward.

Ranking of the stocks are done on the basis of their excess return to beta. The selection of the stocks depends on a unique cut off such that all stocks with higher

ratios of $\frac{(R_i - R_f)}{\beta_i}$ are included and the stocks with lower ratio are left off. The cut-off point is denoted by C^* .

The steps for finding out the stocks to be included in the optimal portfolio are given below:

- i. Find out the "excess return to beta" ratio for each stock under consideration.
- ii. Rank them from the highest to the lowest (in descending order).
- iii. Proceed to calculate C_i for all the stocks according to the ranked order using the following formula.

$$C_i = \frac{\sigma_m^2 \sum_{i=1}^N \frac{(R_i - R_f)\beta_i}{\sigma_{ei}^2}}{1 + \sigma_m^2 \sum_{i=1}^N \frac{\beta_i}{\sigma_{ei}^2}}$$

Where,

$$\sigma_m^2 = \text{variance of the market index}$$

$$\sigma_{ei}^2 = \text{variance of a stock's movement that is not associated with the movement of the market index i.e. stock's unsystematic risk.}$$

- iv. The cumulated values of C_i start decline after a particular point and that point is taken as the cut-off point and that stock ratio is cut-off ratio C^* . Once we know which securities are to be included in the optimum portfolio, we must calculate the percentage invested in each security.

The percentage involved in each security is:

$$X_i = \frac{Z_i}{\sum_{i=1}^N Z_i}$$

Where,

$$Z_i = \frac{\beta_i}{\sigma_{ei}^2} \left(\frac{(R_i - R_f)}{\beta_i} - C^* \right)$$

ANALYSIS AND FINDINGS

From Table-2 it is clearly seen that the security of Dr Reddy's Lab, having the highest excess return to beta ratio (0.21251158), occupies the first place. The security of Bajaj auto, having the second highest excess return to beta ratio (0.17039774), occupies the second place. In this way, Hero MotoCorp is third and Hindustan Unilever is fourth and so on. The security of BHEL occupies the last place within the data set.

Source: Own Compilation with Excel

All the stocks with $(R_i - R_f) / \beta_i > C^*$ are selected. The cumulated values of C_i start declining after a particular C_i and that point is taken as the cut-off point.

The highest value of C_i is taken as the cut-off point that is C^* . From the Table 3, it is seen that stock of ITC has the highest cut-off rate of $C^* = 0.0723936$. For the

$$\frac{(R_i - R_f)}{\beta_i}$$

securities having the rank of 1 to 9, $\beta_i > C^*$. Hence the optimum portfolio consists of securities ranked 1 to 9 i.e. Dr Reddy's Lab, Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, and ITC.

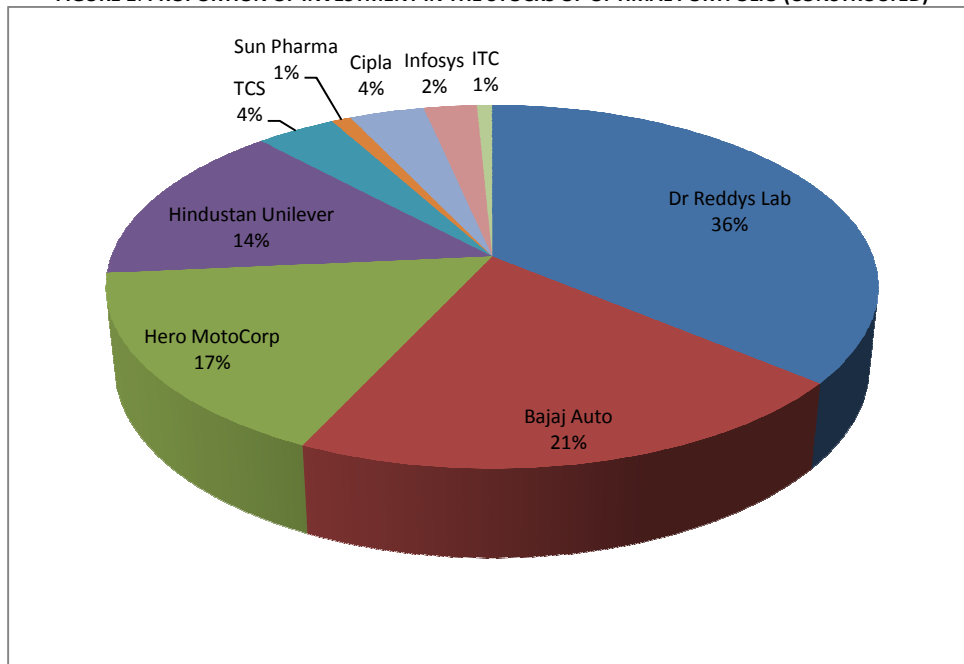

TABLE 4: CALCULATION OF Z_i AND X_i FOR THE SELECTED SECURITIES IN THE OPTIMAL PORTFOLIO

Company	$\frac{\beta}{\sigma_{ei}^2}$	$\frac{R_i - R_f}{\beta_i}$	Z_i	X_i
Dr Reddys Lab	0.127876956	0.212512	0.0179178	36.08795
Bajaj Auto	0.105577666	0.170398	0.010347	20.83973
Hero MotoCorp	0.129646835	0.136044	0.008252	16.62014
Hindustan Unilever	0.16980426	0.114864	0.0072116	14.52483
TCS	0.157771987	0.084771	0.0019528	3.933099
Sun Pharma	0.043159011	0.083364	0.0004735	0.953585
Cipla	0.177157603	0.08273	0.0018311	3.687899
Infosys	0.274672219	0.077114	0.0012966	2.611436
ITC	0.124009243	0.075362	0.0003681	0.741333
			$\sum Z_i = 0.0496504$	$\sum X_i = 100$

From Table-4 it is seen that the proportion of investment to be made for each of the nine securities in the optimal portfolio of stocks viz. Dr Reddy's Lab ,Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, ITC are 36.09%, 20.84%, 16.62%, 14.52%, 3.933%, 0.954%, 3.688%, 2.611%, 0.741% respectively. Among nine securities selected for the investment, three companies viz. Dr Reddy's Lab, Sun Pharma, and Cipla belongs to pharmaceuticals sector, two companies viz. Bajaj Auto, Hero MotoCorp belongs to automobile sector, two companies viz. Hindustan Unilever, TCS belongs to FMCG sector and two companies viz. TCS and Infosys belongs to IT sector.

The proportion of stocks in the composition of optimal portfolio can be shown in the following Pie diagram (Figure 1):

FIGURE 1: PROPORTION OF INVESTMENT IN THE STOCKS OF OPTIMAL PORTFOLIO (CONSTRUCTED)

CONCLUSION

By constructing a portfolio, investors attempt to spread risk by not putting all eggs into one basket. Sharpe model has simplified the process of constructing portfolio by relating the return in a security to a single market index. Out of the 30 stocks that are included in S&P BSE SENSEX, nine stocks namely Dr Reddy's Lab, Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, ITC are included in the Optimal Portfolio constructed in this study with maximum suggested investment in Dr Reddy's Lab followed by Bajaj Auto, Hero MotoCorp, Hindustan Unilever, TCS, Sun Pharma, Cipla, Infosys, ITC respectively. The portfolio is well diversified consisting of securities from pharmaceuticals, automobile, FMCG and IT sectors.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Commerce, Economics & Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail infoijrcm@gmail.com for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail infoijrcm@gmail.com.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-
Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
