CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Business Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email addresses: infoijrcm@gmail.com or info@ijrcm.org.in.

GUIDELINES FOR SUBMISSION OF MANUSCRIPT

1. **COVERING LETTER FOR SUBMISSION:**

DATED: _____

THE EDITOR

IJRCM

Subject: SUBMISSION OF MANUSCRIPT IN THE AREA OF _____.

(e.g. Computer/IT/Finance/Marketing/HRM/General Management/other, please specify).

DEAR SIR/MADAM

Please find my submission of manuscript titled ' _____ ' for possible publication in your journal.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication anywhere.

I affirm that all author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if our/my manuscript is accepted, I/We agree to comply with the formalities as given on the website of journal & you are free to publish our contribution to any of your journals.

NAME OF CORRESPONDING AUTHOR:

Designation:

Affiliation with full address & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

2. **INTRODUCTION:** Manuscript must be in British English prepared on a standard A4 size paper setting. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of the every page.
3. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.
4. **AUTHOR NAME(S) & AFFILIATIONS:** The author (s) full name, designation, affiliation (s), address, mobile/landline numbers, and email/alternate email address should be in italic & 11-point Calibri Font. It must be centered underneath the title.
5. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para.
6. **KEYWORDS:** Abstract must be followed by list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should be in a 8 point Calibri Font, single spaced and justified.
10. **FIGURES & TABLES:** These should be simple, centered, separately numbered & self explained, and titles must be above the tables/figures. Sources of data should be mentioned below the table/figure. It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. It must be single spaced, and at the end of the manuscript. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per following:
 - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
 - Use **(ed.)** for one editor, and **(ed.s)** for multiple editors.
 - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
 - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
 - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
 - For titles in a language other than English, provide an English translation in parentheses.
 - The location of endnotes within the text should be indicated by superscript numbers.

EFFECT OF FAMILY CONTROL AND INTERNAL AUDITOR ON ACCRUAL ITEMS OF OPERATIONAL ACCOUNTING (GIULI AND HIN CONSERVATIVE MODEL)

MOHAMADREZA ABDOLI
FACULTY
DEPARTMENT OF ACCOUNTING
SHAHROOD BRANCH
ISLAMIC AZAD UNIVERSITY
SHAHROOD, IRAN

ABSTRACT

In this study, we deal with the effect of internal auditors and family control on operational accrual items measurements across the Tehran Stock Exchange (TSE) registered firms. The operational accrual items of the G iuli and HIn Model have been used to measure the conservatism level. In comparison with other models, including Basu's model, the above-mentioned model is more reliable. "Herfindal-Hirschman Model" has been used to measure the family control. A total of 125 corporations were selected randomly in 2011 for this study. Both regression and Pearson methods were used as the statistical methods of the study. Our findings approved the very intensive relationship between the internal auditor and the operational accrual items measurement. The impact of the family control over corporations on their conservatism level has been verified, as well; there was a positive and direct relation between the two mentioned variables. Also, the effects of firm size and financial leverage on the operational accrual items have been approved; the relation between these variables was more intense.

KEYWORDS

Conservatism, internal auditor, family control

INTRODUCTION

 iuli and Hin(2000) have analyzed incomes, cash flows and accrual items alterations during a 30-year period and have discovered an increased conservatism there. According to the International Accounting Standard manifesto (SFAC No. 95), conservatism is a warily response to any type of ambiguity caused by the environmental hazards across the firm. Therefore, if there is an equal probability for estimating a sum which would be paid or received in the future, the conservatism allows estimation with lower optimism. Moreover, in the case of an unequal probability, using the pessimistic sum will not be allowed by the conservatism theory. Basu (1997) has examined the conservatism concept in the on-time reflection of accounting earnings in stocks and effect of both good and bad news and also has formulated a model for measuring. Watts (2003) has offered three overall criteria for measuring the conservatism as net assets, earnings and accrual items and earnings to stock return. He also posed four interpretations for conservatism and scrutinized them through contractual, legislative, fiscal and legal aspects.

According to the Iranian accounting standards, the financial statement providers are bound to urge caution when disclosing nature and amount of uncertainties. On Iranian accounting standards point of view, the conservatism is a degree of surveillance in which adjudication is necessary to make estimation when uncertainty is dominant, as revenues and assets should not be exaggerated and expenses or liabilities should not be understated. It will be explained that using the conservatism should not be led to recognition of the unnecessary reserves, because it violates the neutrality of the financial reporting.

Given the definition broadcasted by the organization for Economic Co-operation and Development (OECD) in 2001, the corporate governance is the structure of relations and responsibilities among a major group including stockholders, board members and managing director to promote the necessary competitive performance to achieve the initial participation objectives (judge 2010) . Some other definitions stress the legal aspect of the corporate governance, e.g. IFAC which has considered the corporate governance fundamentally a proper measure to compare various countries and it believes that rules of each country play a key role in the corporate governance system; others emphasize keeping broader groups' interests and deem corporate as responsible for any damages over the society, upcoming generation, natural resources and the environment.(Young et al ,2011 and Judge ,2010)

Hasaas Yeganeh (2009) and Hesiang et al (2010) defines the corporate governance as a set of rules, regulations, structures and processes and cultures which make us able to achieve transparency and accountability necessary for observing stockholders' rights. Some authors (wang et al (2009), mohamad et al (2010) ,mehrani et al (2009)) has used conditional and unconditional conservatism terms. The conditional conservatism includes imperative accounting standards such as application of the minimum prime cost or market price apart from their good or bad consequences, usually it is called income statements conservatism. However, the unconditional conservatism covers the financial behaviors which are not considered imperative according to the accounting standards and the book values of net assets are shown lower than the actual amount, this kind of book value is called balance sheet book value.

Accordingly, we will deal with the conducted studies in Iran and other countries with different accounting, legislative and legal conditions aiming to elicit our study hypotheses. (Hasas, 2009 and Annelies et al, 2010 and Midary, 2006 and Renders, 2010)

AN OVERVIEW ON RESEARCH BACKGROUND AND HYPOTHESIS EXTRACTION

John Manuel and Ossama (2009) have embarked on analyzing the relation between conservatism and the corporate governance. They have examined the corporate governance through either internal or external aspects and have used market and book values for conservatism. They found that there is a direct relationship between firms with stronger corporate governance and conservatism level. They also came to a conclusion that firms with stronger corporate governance use discretionary accrual items to inform investors about bad news.

Rahmani and Gholamzadeh (2009) have analyzed the relation between the public ownership in the capital market and conservatism in the financial reporting. They consider conservatism as an index to improve the quality of the financial reporting. They have examined different conservatisms across financial reporting of 40 firms before and after their enrollment in TSE. Their results showed that the conservatism of financial reporting grew pale after enrolment in TSE.

Mashayekh, Mohammadabadi and Hesarzadeh (2009) have begun to analyze the impact of the accounting conservatism on income stability and have concluded that income dividends are decreased through increasing conservatism across the Iranian firms.

Karami, Hosseini and Hassani have analyzed the relationship between corporate governance mechanisms and conservatism across the TSE registered firms. They believe firms' boards can act as the supervisor of the CEOs performance and prevents them from divulging income information and postponing losses, Basu model has been used for conservatism. Their results approve the meaningful and positive relationship between ownership percentage of the executive board members ad holding investors with conservatism and the negative relationship between nonexecutive board members and conservatism of firms.

Mohamad, et al(2010) have embarked on analyzing the relationship between the accounting conservatism, the corporate governance and effect of politic factors. They found that bad news consequences act quicker than good news; moreover, the correlation coefficients of audit committee, size of directors and independence of directors are stronger and conservatism has grown in such firms, they also found the trivial effect of the political condition on price alterations

caused by good and bad news, there was a negative relation between them while the government ownership makes a positive effect. Finally, they concluded that there is a positive and significant effect for both political factors and corporate governance to improve the quality of income.

Kang, Cheng and James (2010) have fathomed impact of the capital structure on conservatism of accounting digits in China. They have used either Basu model or its refined version, "Ball and Shivakumar", to measure conservatism. They have found that firms whose stocks turnover are low has lower conservatism rate as well. In confirmation of their previous studies, they have discovered that there are a direct relationship between ownership concentration and asymmetry of information and hence agency expenses in firms, thus demands for conservative profits will be dropped in such firms.

Chi, Liv and Wuang (2009) have analyzed the effective factors of the conservative behavior occurrence across firms. To do so, they have studied corporate governance factor. They believed that firms which face with agency expenses problem often prefer to be conservative. Therefore, any weak corporate governance system in such firms may end to more accounting conservative behavior. They also came to the conclusion that firms whose corporate governance is weaker are more inclined to conduct accounting conservative behavior.

Relying on Giuli and Hin Model, Bani-mahd and Baghbani (2009) have measured conservatism rate across TSE registered firms. They have analyzed the effect of corporate ownership type, firm size and financial leverage/ unprofitability ratio across firms. They have found a strong relationship between unprofitability and conservatism rate of firms, so, conservatism enhances value of unprofitable firms in long term.

Given the results gained from both Iranian and foreign studies, the following hypotheses are set down:

1. There is a meaningful and positive relationship between accounting conservatism and an internal auditor in a firm
2. There is a meaningful and positive relation between accounting conservatism and family control in a firm.

METHODOLOGY

All variables and the procedure used to measure them are explained as the first step to fulfill the study and then the model used to conduct study is described considering the theoretical concepts and the results of other studies.

INTERNAL AUDITOR

According to the Iranian corporate governance law, the commercial firms must be equipped with an internal audit department which is monitored and controlled by their managing director or board of directors. The internal auditor can act and make report from all operational and financial fields of accounting. There is not any audit committee in Iran, instead the internal audit play this role in a more limited framework. Aiming to analyze hypotheses of our study, we marked firms with internal audit and without internal audit with 1 and 0, respectively.

FAMILY OWNERSHIP

Major shareholders of Iranian firms typically select the directors and minor stockholders are affectless to select either directors or managing director. It is expected that the major stockholder maintain their own interests in this issue and disregard minor and dispersed stockholders. The Iranian corporate governance law has not posed any certain controlling mechanism for this problem (Abdoli, 2011). In order to measure this variable across all questioned firms the corporate governance concentration rank is measured. The higher the index is obtained, the more concentrated stockholders will be.

Ownership concentration is the manner by which stocks are distributed across stockholders of different firms. The less the number of stockholders is, the more concentrated ownership will be. In this study, Herfindal-Hirschman Index (HHI) has been used to qualify ownership concentration ratio. The index is the sum square of stocks percent belonging to stockholders, as the index is increased, ownership concentration rate will be increased too and whenever the whole shares belong to an individual, then it will obtain the highest value, i.e. 10,000 units. If the ownership structure is dispersed and all stockholders have equal ratios, then the HHI will find the lowest value, i.e. $N/10000$.

$$HHI = \sum (p_i / p * 100)^2 \text{ (equation1)}$$

CONSERVATISM

With regard to shortages of Basu Model and other relevant models as well as the weak efficient capital market of Iran and relying on a model independent from market prices, we have decided to employ Giuli and Hin Model (2000) to measure conservative index; the conservative index is measured here as:

(equation2)

$$\text{Conservative index} = \text{Total Accruals} \times (-1) / \text{Total Asset}$$

And (equation3)

$$\text{Total accruals} = (\text{Net Income} - \text{Net Operating Cash Flow}) + \text{Depreciation of Assets}$$

The total assets are equal to book value of assets for 2011. Giuli and Hin (2000) believed, "Increased accrual items can be an index of any change in the accounting conservatism degree in long term". In other words, if accrual items are increased, then the conservatism is dropped and vice versa. Therefore, in order to specify direct of the conservatism alterations, the accrual items have been multiplied by -1 which homogenizes information across firms with different sizes; so, total accrual items have been divided by total assets.

CONTROL VARIABLE - FIRM SIZE AND LEVERAGE RATIO

Sizes of firms have been calculated using total assets logarithm, as large as book value recorded for the end of 2011. The leverage ratio has been obtained through dividing total liability by total assets of each firm.

Given the theoretical concepts of the study, relations among variables are evaluated and modeled as follows:

$$\text{Total accrual} \times -1 / \text{total asset} = \alpha_0 + \alpha_1 * \text{INT AUD} + \alpha_2 * \text{OWN CONC} + \alpha_3 * \text{SIZE} + \alpha_4 * \text{LEVERAGE} \text{ (equation4)}$$

Where, $\text{Total accrual} \times -1 / \text{total asset}$ is considered as the dependent variable while INT AUD and OWN CONC which show internal auditor and ownership concentration rank in firms respectively are independent variables of the study and size of leverage shows leverage ratio of firms.

Now, we take on analyzing the results of the descriptive statistics of the questioned firms and the results of presumptions of the regression test are presented which will be accompanied with the results of the results testing our hypotheses.

STATISTICAL POPULATION AND SAMPLE

In order to analyze the model and to test hypotheses, the TSE registered firms have been examined. End of fiscal year of the selected firms, excluding investment and brokerage firms, should be March 20 and their financial data for 2009 to 2011 period should be available. As mentioned previously, a total of 125 firms active in different industries were selected randomly. The information is summarized in table 1.

TABLE 1: RESULTS OF THE DESCRIPTIVE STATISTICS OF EACH VARIABLE

	Minimum	Maximum	Mean	Std. Deviation
conservatism Index	0.42	.77	.667	.092
Rank of Concentration	2395	7639	4537	1279
Internal Auditor	.00	1.00	.617	.080
Size of Corporation	7.28	16.82	12.762	2.763
Leverage Ratio	.00	.846	.594	.118

As you can see in the above table, most firms have applied the conservative behavior in their financial report and have reported high optional accrual items. 62% of firms have internal audit, their sizes are relatively equal and most of them suffer from high rates of liability and financial leverage and their average leverage ratio is 60% which is very high.

TABLE 2: RESULTS OF DURBIN-WATSON TEST

Model	R	R Square	Adjusted R Square	Durbin-Watson
1	0.641	.520	.472	1.532

The statistic of this test is 1.532, standing 1.5 and 2.5 makes it appropriate. Therefore, it can be concluded that errors are independent from each other, so a regression model can be used to test hypotheses.

Now all results obtained for our hypotheses are analyzed statistically.

1. There is a meaningful and positive relationship between accounting conservatism and internal audit in the firm.

This hypothesis develops the expectation that despite an internal auditor in the firm, the possibility of financial behaviors leading to development of an accounting conservative report is very rare. Results are shown in table 11.

TABLE 3: REGRESSION RESULTS OF THE FIRST HYPOTHESIS

Model	Non-standardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	.378	.029		3.020	.000
Internal Auditor	.322	.040	.210	2.193	.047

As the table represents, Sign value is lower than alpha 5%, hence, the hypothesis is approved. In other words, there is a meaningful relationship between internal auditor and conservatism level in the firm. Beta coefficient value confirms the relation too; however, the relation type between them has been determined as positive.

2. There is a meaningful and positive relationship between accounting and ownership concentration rank of a firm

According to the theoretical concepts, it is expected that firms whose ownership concentration rank is higher (~10000), have higher conservatism which is because of the higher monitoring possibility by the major stockholder as well as higher family control. The related results have been shown in table 4.

TABLE 4: REGRESSION RESULTS OF THE SECOND HYPOTHESIS

Model	Non-standardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	.206	.063		2.217	.000
Rank of Concentration	.643	.054	.489	2.784	.015

This table shows that Sign value is lower than Alpha 5% level, therefore, our hypothesis is confirmed and there is a relationship between percent of the major shareholders and family control across firms and conservatism level of financial behavior of directors.

The FORWARD model has been employed to analyze control variables. The seven variables used as the corporate governance specifications to predict conservatism have been selected out of many corporate governance specifications. As normal issues some specifications (variables) may not be good predictors. Therefore, when the irrelevant variables are used in this model, the criterion error is raised without improvement of prediction. Separate application of each of two control variables including firm size and financial leverage ratio for each of the above-mentioned hypotheses changed (increased) their correlation value and this level is meaningful given the "alpha" value. R² rate for firm size and financial leverage were 35% and 39%, respectively.

DISCUSSION AND CONCLUSION

According to the theoretical concepts, the results of other studies on the conservatism, the hypothesis about the effect of political behaviors and agency theory it is expected that directors of larger firms suffering from external pressures embark on taking more conservative behaviors and recognize their profits later and understate interest rates through identifying expenses and various reserves. It is the case for firms whose leverage ratio is higher.

Our findings indicated that both family control and major stockholders who assume themselves as the main owners of firms, select executive directors and do not consider interests of minor stockholders emphasize and support conservative behavior in firms. Directors can meet expectations and requirements of major stockholders on paying profits and withdrawing cash from the firms through submitting delayed reports on incomes and quicker identification of expenses, they also can postpone taxpaying. Tax issue is one of the most important effective factors of the financial behavior of the Iranian firms who consider this goal and issue in their financial reports.

Internal audit in firms has not prevented them from fulfilling conservative behavior and they have emphasized the delayed recognition of interests and have tried to recognize liabilities sooner. It can be explained by their dependency to executive director and particularly managing director of the Iranian firms. The dependency of the internal auditors is due to lack of precise definition of their position in firms and also lack of corporate governance low of Iran.

Like other studies, in this study the effect of firm size and their financial leverage ratio on conservatism of firms was positive. In other words, these components increase conservatism level imposed by the executive directors of firms. Such increasing is justified by keeping interest and escaping from surveillance of others such as financiers, the government and policy makers (according to politic and agency theory).

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Commerce, IT and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mails i.e. **infoijrcm@gmail.com** or **info@ijrcm.org.in** for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail **infoijrcm@gmail.com**.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours
