## CALL FOR MANUSCRIPTS

We invite unpublished novel, original, empirical and high quality research work pertaining to recent developments & practices in the area of Computer, Business, Finance, Marketing, Human Resource Management, General Management, Banking, Insurance, Corporate Governance and emerging paradigms in allied subjects like Accounting Education; Accounting Information Systems; Accounting Theory & Practice; Auditing; Behavioral Accounting; Behavioral Economics; Corporate Finance; Cost Accounting; Econometrics; Economic Development; Economic History; Financial Institutions & Markets; Financial Services; Fiscal Policy; Government & Non Profit Accounting; Industrial Organization; International Economics & Trade; International Finance; Macro Economics; Micro Economics; Monetary Policy; Portfolio & Security Analysis; Public Policy Economics; Real Estate; Regional Economics; Tax Accounting; Advertising & Promotion Management; Business Education; Management Information Systems (MIS); Business Law, Public Responsibility & Ethics; Communication; Direct Marketing; E-Commerce; Global Business; Health Care Administration; Labor Relations & Human Resource Management; Marketing Research; Marketing Theory & Applications; Non-Profit Organizations; Office Administration/Management; Operations Research/Statistics; Organizational Behavior & Theory; Organizational Development; Production/Operations; Public Administration; Purchasing/Materials Management; Retailing; Sales/Selling; Services; Small Business Entrepreneurship; Strategic Management Policy; Technology/Innovation; Tourism, Hospitality & Leisure; Transportation/Physical Distribution; Algorithms; Artificial Intelligence; Compilers & Translation; Computer Aided Design (CAD); Computer Aided Manufacturing; Computer Graphics; Computer Organization & Architecture; Database Structures & Systems; Digital Logic; Discrete Structures; Internet; Management Information Systems; Modeling & Simulation; Multimedia; Neural Systems/Neural Networks; Numerical Analysis/Scientific Computing; Object Oriented Programming; Operating Systems; Programming Languages; Robotics; Symbolic & Formal Logic and Web Design. The above mentioned tracks are only indicative, and not exhaustive.

Anybody can submit the soft copy of his/her manuscript **anytime** in M.S. Word format after preparing the same as per our submission guidelines duly available on our website under the heading guidelines for submission, at the email address: [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com).

## GUIDELINES FOR SUBMISSION OF MANUSCRIPT

### 1. COVERING LETTER FOR SUBMISSION:

DATED: \_\_\_\_\_

**THE EDITOR**  
IJRCM

**Subject:** SUBMISSION OF MANUSCRIPT IN THE AREA OF \_\_\_\_\_.

**(e.g. Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)**

**DEAR SIR/MADAM**

Please find my submission of manuscript entitled ' \_\_\_\_\_ ' for possible publication in your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published elsewhere in any language fully or partly, nor is it under review for publication elsewhere.

I affirm that all the author (s) have seen and agreed to the submitted version of the manuscript and their inclusion of name (s) as co-author (s).

Also, if my/our manuscript is accepted, I/We agree to comply with the formalities as given on the website of the journal & you are free to publish our contribution in any of your journals.

#### **NAME OF CORRESPONDING AUTHOR:**

Designation:

Affiliation with full address, contact numbers & Pin Code:

Residential address with Pin Code:

Mobile Number (s):

Landline Number (s):

E-mail Address:

Alternate E-mail Address:

#### **NOTES:**

- a) The whole manuscript is required to be in **ONE MS WORD FILE** only (pdf. version is liable to be rejected without any consideration), which will start from the covering letter, inside the manuscript.
- b) The sender is required to mention the following in the **SUBJECT COLUMN** of the mail:  
**New Manuscript for Review in the area of** (Finance/Marketing/HRM/General Management/Economics/Psychology/Law/Computer/IT/Engineering/Mathematics/other, please specify)
- c) There is no need to give any text in the body of mail, except the cases where the author wishes to give any specific message w.r.t. to the manuscript.
- d) The total size of the file containing the manuscript is required to be below **500 KB**.
- e) Abstract alone will not be considered for review, and the author is required to submit the complete manuscript in the first instance.
- f) The journal gives acknowledgement w.r.t. the receipt of every email and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of manuscript, within two days of submission, the corresponding author is required to demand for the same by sending separate mail to the journal.

2. **MANUSCRIPT TITLE:** The title of the paper should be in a 12 point Calibri Font. It should be bold typed, centered and fully capitalised.

3. **AUTHOR NAME (S) & AFFILIATIONS:** The author (s) **full name, designation, affiliation (s), address, mobile/landline numbers**, and **email/alternate email address** should be in italic & 11-point Calibri Font. It must be centered underneath the title.

4. **ABSTRACT:** Abstract should be in fully italicized text, not exceeding 250 words. The abstract must be informative and explain the background, aims, methods, results & conclusion in a single para. Abbreviations must be mentioned in full.

5. **KEYWORDS:** Abstract must be followed by a list of keywords, subject to the maximum of five. These should be arranged in alphabetic order separated by commas and full stops at the end.
6. **MANUSCRIPT:** Manuscript must be in **BRITISH ENGLISH** prepared on a standard A4 size **PORTRAIT SETTING PAPER**. It must be prepared on a single space and single column with 1" margin set for top, bottom, left and right. It should be typed in 8 point Calibri Font with page numbers at the bottom and centre of every page. It should be free from grammatical, spelling and punctuation errors and must be thoroughly edited.
7. **HEADINGS:** All the headings should be in a 10 point Calibri Font. These must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.
8. **SUB-HEADINGS:** All the sub-headings should be in a 8 point Calibri Font. These must be bold-faced, aligned left and fully capitalised.
9. **MAIN TEXT:** The main text should follow the following sequence:

**INTRODUCTION****REVIEW OF LITERATURE****NEED/IMPORTANCE OF THE STUDY****STATEMENT OF THE PROBLEM****OBJECTIVES****HYPOTHESES****RESEARCH METHODOLOGY****RESULTS & DISCUSSION****FINDINGS****RECOMMENDATIONS/SUGGESTIONS****CONCLUSIONS****SCOPE FOR FURTHER RESEARCH****ACKNOWLEDGMENTS****REFERENCES****APPENDIX/ANNEXURE**

It should be in a 8 point Calibri Font, single spaced and justified. The manuscript should preferably not exceed **5000 WORDS**.

10. **FIGURES & TABLES:** These should be simple, crystal clear, centered, separately numbered & self explained, and **titles must be above the table/figure. Sources of data should be mentioned below the table/figure.** It should be ensured that the tables/figures are referred to from the main text.
11. **EQUATIONS:** These should be consecutively numbered in parentheses, horizontally centered with equation number placed at the right.
12. **REFERENCES:** The list of all references should be alphabetically arranged. The author (s) should mention only the actually utilised references in the preparation of manuscript and they are supposed to follow **Harvard Style of Referencing**. The author (s) are supposed to follow the references as per the following:
  - All works cited in the text (including sources for tables and figures) should be listed alphabetically.
  - Use (ed.) for one editor, and (ed.s) for multiple editors.
  - When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc, in chronologically ascending order.
  - Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
  - The title of books and journals should be in italics. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
  - For titles in a language other than English, provide an English translation in parentheses.
  - The location of endnotes within the text should be indicated by superscript numbers.

**PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:****BOOKS**

**ABSTRACT**

CRM is a comprehensive set of processes and technologies for managing the relationships with potential and current customer across the business functions. The goal of CRM function is optimize customer satisfaction and revenue through relationship built with potential and current customer across the business functions. The first CRM Strategies are based on customer intelligence. The customer intelligence is built using Sales force automation, Customer service, marketing automation system. The second approach is more dynamic and uses processes to understand customer behaviour to formulate CRM strategies. In process driven approach, CRM solution senses the behaviour of the customer and acts proactively to deliver the services. This system has capability to capture these interactions, analyse, process them, and formulate a strategy to service the customer. Operational CRM supports for Marketing supports Campaign, promotion, materials management, Marketing planning – segment, channel, contact, product, pricing and category management. Analytical CRM supports the detailed analysis that provides the insights and evidence necessary to identify opportunities for increased effectiveness and efficiency and also this paper focuses the techniques and Challenges of CRM. As more businesses continue to compete on a global level, it will become more important for them to use successful CRM techniques.

**KEYWORDS**

CRM, modern marketing.

**INTRODUCTION**

CRM is a comprehensive set of processes and technologies for managing the relationships with potential and current customer across the business functions. The goal of CRM function is optimize customer satisfaction and revenue through relationship built with potential and current customer across the business functions. The relationship is built through managing customer initiatives and behavior in such a way that customer experience is full of comfort, happiness and satisfaction. CRM is a number of strategies and technologies that are used to build stronger relationships between companies and their customers. A company will store information that is related to their customers, and they will spend time analyzing it so that it can be used for this purpose. The competition in the global market has become highly competitive, and it has become easier for customers to switch companies if they are not happy with the service they receive. One of the primary goals of CRM is to maintain customer. When it is used effectively, a company will be able to build a relationship with their customers that can last a lifetime. CRM is being a methodology, an approach that a company will use to achieve their goals. It should be directly connected to the philosophy of the company. It must guide all of its policies, and it must be an important part of customer service and marketing. If this is not done, the CRM system will become a failure. There are a number of things the ideal CRM system should have. It should allow the company to find the factors that interest their customers the most. A company must realize that it is impossible for them to succeed if they do not cater to the desires and needs of their customers. With CRM, the customer is always right, and they are the most important factor in the success of the company. It is also important for the company to use measures that are dependent on their customers. This will greatly tip the odds of success in their favor.

**WHAT IS CRM?**

CRM, or Customer Relationship Management, is a company -wide business strategy designed to reduce costs and increase profitability by solidifying customer satisfaction, loyalty, and advocacy. True CRM brings together information from all data sources within an organization (and where appropriate, from outside the organization) to give one, holistic view of each customer in real time. This allows customer facing employees in such areas as sales, customer support, and marketing to make quick yet informed decisions on everything from cross-selling and up selling opportunities to target marketing strategies to competitive positioning tactics.

**OBJECTIVES OF THE STUDY**

The present study is undertaken with the following objectives:

1. To understand the different approaches of CRM Strategies.
2. To study the types and benefits of CRM.
3. To develop new techniques of CRM.
4. To analyze the challenges faced by the CRM

**APPROACHES TO CRM**

I. The first approaches of CRM Strategies are based on customer intelligence. The customer intelligence is built using the information from following systems.

I. **Sales force automation** The customer intelligence is built using

- ✓ Lead tracking
- ✓ Opportunity management
- ✓ Contact management
- ✓ Order booking and follow up delivery

II. **Customer service**

- ✓ Call center management
- ✓ Online help
- ✓ Internal help desk
- ✓ Knowledge based expert system

III. **Marketing automation system**

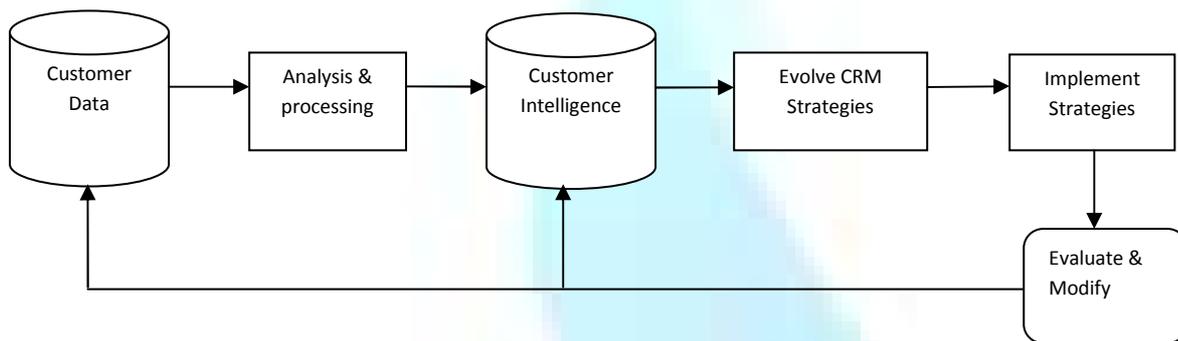

- ✓ E mail response management
- ✓ E commerce
- ✓ Web enabled ordering systems
- ✓ Information sharing with internal and external customers

II. The second approach is more dynamic and uses processes to understand customer behaviour to formulate CRM strategies. In process driven approach, CRM solution senses the behaviour of the customer and acts proactively to deliver the services. In the process approach, customer service process cycle is managed online and in real time. The customer Service Process Cycle has following phases:

- Initiation of service
- Transaction of service
- pre-service
- service
- post service

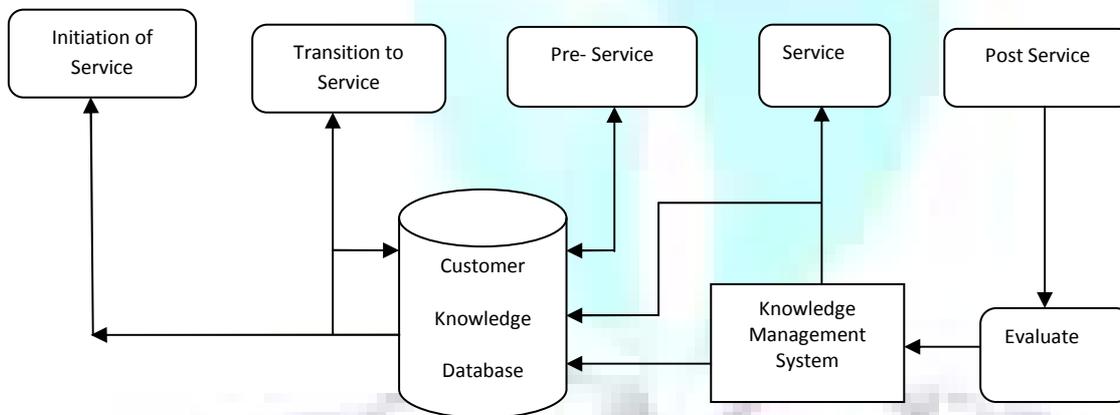

In this approach customer is provided with tools and facilities to interact with the organisation. CRM system has capability to capture these interactions, analyse, process them, and formulate a strategy to service the customer. In the process driven approach every customer is treated as a unique customer.

**a. DATA DRIVEN CRM MODEL**

**b. PROCESS DRIVEN CRM MODEL**

This module include contract management, Prospecting, Lead analysis and qualification, Lead management Forecasting, Pipeline management. Sales management system executes the sales order to customer.

Its design is intended for delivery of service. It is a sales operations management system. CRM is a system with strategic role and objective to build a relationship with the customer to build business potential, loyalty and repeat business.

**TYPES OF CRM**

**OPERATIONAL CRM**

Operational CRM enables consistent and efficient execution of all customers facing Processes. Operational CRM for Marketing supports:

- ★ Campaign, promotion and event management
- ★ Developing a single view of the customer
- ★ Marketing materials management
- ★ Marketing planning – segment, channel, contact and product
- ★ Offer development
- ★ Product , pricing and category management

**ANALYTICAL CRM**

Analytical CRM supports the detailed analysis that provides the insights and evidence necessary to identify opportunities for increased effectiveness and efficiency. Process driven CRM is also termed as ‘analytical CRM’ helping to enhance the value of CRM system.

**Following processes are handled in analytical CRM:**

- Customer value management
- Customer satisfaction analysis
- Revenue analysis by customer satisfaction
- Customer classification by different profits

- Customer buying behaviour analysis, current and sequential
- Customer Vs. servicing channel analysis
- Response capturing to marketing campaigns and its analysis

Analysis in analytical CRM is carried with the help of IT tools. Most popular and often used tool is OLAP- Online Analytical Processing. This tool helps access data online at all levels and provides analysis as required by the user. OLAP brings out certain attributes of data organized around several dimensions such as Customer segment, Period of sale, Location, Market segment and so on. Another powerful tool for analysis is "Data Mining". This application is possible if an organization has a data warehouse system. Data warehouse Stores processed data with context from cross functional areas with its metadata for strategic analysis. Data mining tools identify patterns and relations in data and deliver valuable insight in the business. It has focus three areas, namely prediction of customer decisions based on historical data, sequence prediction of customer activities and association prediction of items, which move together.

#### **BENEFITS OF A CRM**

The benefits of a CRM system are many but only if it is properly integrated. CRM system should always refer to the 3 P – personnel, processes, programs.

##### **1. COST MINIMIZATION**

With a CRM system the company makes their customers partners, not just business objects. Customers are offered themselves to bring their offers and access to sufficient information which to allow them to decide whether to purchase a product or service, thus the company will reduce its staff to serve this activity.

##### **2. CUSTOMER SERVICE**

Full details regarding the relationship with the customer are centralized. This greatly facilitates the work of the department service with clients because they have the necessary information. You should not be asking the customer the same questions again. The company will be able to expect customers' new needs – prior to foresee and to work to meet them.

##### **3. ENHANCE CUSTOMER SATISFACTION**

CRM at the same time assists product sales groups to own greatest degree of service to customers because they are able to competently recognize and satisfy their particular customers' demands. Without having a CRM system customer details could be displaced or even recorded improperly, whenever you carry out a CRM system a sales staff can easily obtain information on every one of the company's customer within the a single location and will presume and satisfy their very own specifications.

##### **4. CUSTOMER RETENTION**

If the company has chosen the right CRM system, the customer will become more loyal and will continue to search for the company again and again.

##### **5. MORE NEW DEALS**

Each new customer will tell about you to some people that eventually will become clients of your company. A company needs to remember that it can rely only on loyal customers – those who will choose the company because they are happy with the price, quality, advertising and service.

##### **6. GREATER PROFITS**

The more new deals signed by the company on lower prices the greater the profits will be.

##### **7. IMPROVE SALES BY ADVERTISING AND CROSS MARKETING DIFFERENT PRODUCTS**

Each and every time a representative of staff notes details regarding their customers in a CRM system they are assisting to develop an image of the routines that the company's customers possess. A CRM at system could monitor anything from the period of day that a customer creates a call and a purchase, to the acquisitions they put together, motivation strategies they're part of as well as additional details chosen up in the discussion such as in the event that they're planning on vacation. A sales team can make use of this particular information to cross sell and up sell other items or solutions to their customers as they will certainly possess an apparent concept of the customers' lifestyles as well as buying methods. The information on a CRM system will additionally permit a staff to look at their own customers' buying trends historically and look for motives in their actions which may suggest a person can easily get in touch with them at the most right moments.

##### **8. PROVIDE CUSTOMER INFORMATION AND FACTS WITHOUT DIFFICULTY**

A CRM system enables whole groups of individuals to talk about business and customer information effortlessly which could conserve time. Acquiring customer track record at hand and being able to provide this particular for a whole product sales staff immediately could make the product sales course of action significantly less complicated. Another advantage could be that the information could be more protected since it will be in the particular location and won't have to be distributed throughout numerous hard drives, published out or delivered electronically onto memory sticks. CRM is just the tool that allows informed decisions and control of all different levels.

## **TECHNIQUES OF CRM**

### **CLASSIFICATION**

Classification is a process, which uses criteria to classify customer population into different classes with associated business data. A class may predict some behavior pattern. For example, customer views will tell which customers buy which products and tell which mode of payment they prefer. When new customers enter the system, it is possible to predict buying and payment behavior of the customer by identifying its class.

### **REGRESSION**

Regression is the process of finding a value of a variable, which is dependent on other variables. Regression process succeeds when a significant relationship between variable and dependent variables is a tested one. For example, the value of business per day can be predicted in the case of grocery chain store using dependent variables, namely time spent, by customer frequency of visits, and class of customer.

### **LINK ANALYSIS**

Link Analysis is a process of finding the links between two sets of variables. The link relationship may be of following types:

- ✓ Lag and lead eg: Sale of umbrellas lags the rainfall.
- ✓ Moving together eg: bread and butter, paper napkins & cups
- ✓ Configured links eg: drinks, chips & soda; bread, milk & eggs.

### **SEGMENTATION**

Segmentation is a process of identifying finite sets of data clusters. For example, customers can be clustered using following clustering criterion

- Buying behaviour
- Value of purchase
- Preference for high value
- Preference for discount/bargain purchase

### **DEVIATION DEFECTION**

Deviation is s process of identifying the deviation from confirmed prior trend or expectations. The analysis of deviation shows whether there is a shift in the pattern due to certain changes in dependent variables or is it a random occurrence.

### **E-CRM**

E-CRM provides a means to conduct interactive personalized transactions and communications with the customers in online and real time mode. In E-CRM interaction begins more intelligently using customer intelligence. One can summarise key features of E-CRM as under:

- Driven by online data mining tools.
- Real time assessment of customer interactions, its analysis and interpretation and startegising the actions based on it.

- Begins to build relationship with customer initiative.

In E-CRM unlike CRM, every customer initiative is treated separately. Each customer is evaluated in real time using customer intelligence database for action prediction. The real strength of a CRM is its ability to provides a rich, value added experience to customer on all channels of initiatives namely call centres, Kiosks, retail outlets, ATMs, self help, PDAs and websites and portals.

#### **CHALLENGES OF CRM**

##### **IMPROVED PROFITABILITY**

As with most business innovations, CRM is ultimately intended to drive revenue and increase profitability for companies that use it. According to Target, increased profitability is the goal of using CRM to enable better targeting of top customers by sales and marketing departments. This is the revenue-generating aspect of CRM. CRM is also intended to reduce costs by cutting down on inefficient advertising to less desirable customers.

##### **BETTER CUSTOMER RELATIONSHIPS**

An underlying premise of CRM is analyzing customer data to continue to improve the customers' experience with your organization. This should lead to stronger loyalty and better profits from core customers. Using CRM database, or software solutions, employees are equipped with stronger information about customers.

##### **CROSS-ORGANIZATIONAL PARTICIPATION**

One of the greatest challenges of CRM is that a company-wide CRM program inherently involves participation from members of departments across the entire organization. CRM programs are typically developed and implement by cross-organizational teams with representation from each functional department. This stimulates cooperation and communication, but putting this into practice is difficult. The website CRM Info line stated in 2010 that "only one in every six companies that have installed CRM have been successful." A main reason for this lack of success is due to confusion within the company. This demonstrates the challenge in getting all departments and employees on board with CRM, which is necessary for long-term success.

##### **TECHNOLOGY STIGMA**

One of the most often cited challenges for companies implementing CRM is the common misconception that CRM is technology-driven, or worse, that it is simply a technology. CRM is supported by a technological infrastructure, including software solutions used to gather, analyze and interpret customer data. However, these technological capabilities alone do nothing to make companies successful. It is grounded in goals, metrics and measurement of performance with customers.

#### **CONCLUSION**

CRM is used to build a long term and profitable relationship with the customer. Analytical CRM is technology driven and uses high-end tools, namely Data Warehousing, Data Mining, OLAP, and statistical analysis tools. The best results are obtained when CRM tools are integrated in CRM solution. CRM solution addresses three requirement of the business, acquisition of new business, expansion of current business, and retention of the customer base and creating a customer culture, adopting customer-based measures, introducing effective IT, segmenting customers, developing an end-to-end process. The degree of change required around each of these measures needs to be evaluated at the outset. To be effective, the CRM process needs to be integrated end-to-end across marketing, sales and customer service. This may require the introduction of board-level representation of the customer. There are important human resource implications, such as managing the expectations created by the project concerning timescale, costs and results.

## **REQUEST FOR FEEDBACK**

**Dear Readers**

At the very outset, International Journal of Research in Commerce, IT and Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue as well as on the journal as a whole, on our E-mail i.e. [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com) for further improvements in the interest of research.

If you have any queries please feel free to contact us on our E-mail [infoijrcm@gmail.com](mailto:infoijrcm@gmail.com).

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward an appropriate consideration.

With sincere regards

Thanking you profoundly

**Academically yours**

## ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.
